

The Golden List

The live account intelligence layer every campaign, sequence, and agent runs off. Scored, enriched, signal-aware, and built to write its own outreach.

Why it matters, in one breath. The Golden List turns a rep's morning from “who should I research today” into “here is exactly who to work, why now, and the message to send.” It is the single foundation both motions, marketing, and sales all run off, which is what makes ten times the throughput possible without losing quality.

Prepared for **Naveen Thilagan** · Director, Product Strategy

Author **Dallas Andrews** · GTM Engineer · July 2026 · Internal working document

The Golden List

Not a spreadsheet. A live account intelligence layer that every campaign, sequence, and agent runs off, and that updates as the market moves.

A record does not just sit there. It gets re-scored when a new signal fires and re-enriched when it goes stale. Six things live on every record, which is what makes one list enough to run the whole motion.

01

Account scoring

Which companies to prioritize, by fit and intent.

02

Contact enrichment

The right people and verified emails, already attached.

03

Intent signals

Why now, layered in from hiring, tech stack, news, filings.

04

Outreach sequences

Each account flows straight into a message set.

05

Rep prioritization

Effort lands on the accounts most likely to convert.

06

Pipeline reporting

Every reply and meeting traces back to the list.

Why it creates impact the first morning a rep opens it

Before the list	With the Golden List
Rep researches accounts one at a time, by hand.	Every account arrives pre-scored and graded. Effort goes to A and B accounts, not guesswork.
Each email written from scratch.	Messages are pre-drafted and on-message. A BDR sends and edits instead of writing cold. This is the throughput lever.
Sales and marketing work off different lists.	One list for both motions and both teams. Everyone acts on the same trigger at the same time.
A good account goes cold before anyone notices.	Signals re-rank the list as news breaks, so timing is built in, not chased.

Everything that follows, the scoring, the messaging, the Clay machine, runs on this one list.

How it ranks and tiers accounts

Every account carries two scores. **Fit** is how well the company matches who we win. **Intent** is how ready they look right now, read from live signals. The two combine into a single letter grade.

Fit + Intent → Grade. A = work now · B = strong fit, warm it up · C = keep on the list · D = drop. A rep never has to decide where to start; the grade already did.

The ranking has a point of view

We do not chase every plan sitting under 4.0 stars. We rank on the bonus dollars we can actually influence inside the window that is still open, not the whole theoretical number. That cut is what keeps the list credible and the effort aimed.

307

contracts in the full
scored universe

98

Tier A+B contracts across
32 parent organizations

~\$2.5B

addressable bonus dollars
in the live window (Tier A+B)

Figures modeled from public CMS Star Ratings data, ranked on the influenceable 2028 measurement window. First target inside Tier A+B is Humana at roughly \$1.08B of that window. These are analytical estimates, not Intradiem-verified customer results.

Signals set the timing

On top of fit and intent, a tiered signal library decides how loud an account gets. This is what turns the list from a ranking into a clock.

TIER 1 · ACT NOW

Market events

October CMS release · Stars language in SEC filings · earnings-call mentions. Fires outreach immediately with a fresh angle.

TIER 2 · THIS WEEK

Plan-level signals

New quality leadership · quality hiring clusters · a contract just under 4.0. Raises priority and refreshes the angle.

TIER 3 · CONTEXT

Supporting detail

Lifts priority but does not fire outreach on its own.

03 · FROM RANKING TO WORDS

The list does not just rank. It writes.

For each contact, the engine picks the angle by role and drafts a short, specific message. We write three variants per segment so we test into the winner instead of guessing which line lands. The quality bar is the approved sample already in use.

1A · the cliff number

1B · the 2028 window

1C · new-leader signal

APPROVED SAMPLE · Stars / Quality leader (1A)

Subject: closing the gap from 3.91 to 4.0

Hi Kristen, your weighted average looks to be right around 3.91, just under the 4.0 line, though you will know the exact picture far better than I do. For plans sitting this close, call center measures are often where the last few points come from.

If useful, I would value 15 minutes to hear how you are approaching your cliff-edge contracts.

2A · bonus dollars

2B · cost of inaction

2C · filing signal

SAMPLE · Finance leader · cost-of-inaction (2B)

Subject: one cycle of margin

Hi {{first_name}}, missing 4.0 by a fraction is the same financial outcome as missing it by a lot: one cycle of bonus either way. For contracts this close, the last few points usually come from the call center measures.

Worth 15 minutes to pressure-test the numbers together?

3A · off the phones

3B · backlog vs. capacity

3C · automation signal

Subject: the work off the phones

Hi {{first_name}}, we already work with {{company}} on the front office; what we don't see yet is how the back office ({{function}}) is handling its volume. Most teams have real-time orchestration on the phones and almost none of it behind them.

Worth 15 minutes to hear how you're running it today?

The experiment loop

Launch all three variants to matched samples. Measure to **qualified reply**, not opens. Kill the lowest, scale the winner, and fold the winning angle into the follow-up. The list gets sharper every week because every send teaches it something.

{{fields}} fill per contact from the Golden List. No fabricated stats; any Intradiem metric is pulled from the verified repository before a message can send.

05 · THE ROAD AHEAD

One list, both motions, and the road ahead

The same Golden List powers both plays we are running. It is not two systems; it is one foundation aimed two ways.

Motion	What the list does for it
Star Ratings net-new logos	Ranks Medicare Advantage payers sitting at the quality-bonus cliff by the dollars still movable, then reaches Finance and Stars leaders with the angle that fits the moment.
Back Office expansion in our base	Sources the back-office buying committees our front-office relationships cannot hand us, then runs targeted campaigns inside accounts we already serve.

Why this is the foundation, not a project. Bringing the new DWO products to market at scale needs pipeline that is aimed, timed, and personalized without adding headcount. The Golden List is that foundation. It's built and ready to stand up in our Clay workspace, aimed at Star Ratings first, with the back-office motion next onto it, and it's designed to get sharper with every campaign rather than needing a rebuild. That compounding is the point, and it is the part that keeps paying off as the product line grows.
