

What we can say in outbound today — and what we're building toward

An update to the value repository set I shared this morning, tightened after the CSM session with Matt Graves. The short version: the discipline holds, the approved list is deliberately narrow right now, and here's exactly what unlocks a bigger one.

Owner: Dallas Andrews • Updated Jul 21, 2026 • Supersedes the raw repository files shared at 10:10-10:23 today

CLEARED TO USE NOW

The list a rep can pull from today

Everything below is either a public, customer-told claim or public data. Nothing here needs a further sign-off to appear in outbound.

Humana

named • 1:1 & 1:many

Source: public SWPP / Intradiem webinar (on-demand at intradiem.com), already used in Nathan's outreach

- Partnership since **2020**; first-year in-year return; **7X ROI** five years in.
- **2.7M** automated contact-center actions in 2025.
- **~2 hours** of capacity unlocked per agent per month (16,000 dynamic work hours, 45,000 automated sessions).
- AHT reduced **45 seconds**; occupancy up **4%**; **12,000** voluntary time-off hours generated.
- On-the-record quote available (Melinda Dippolito, Humana): automation is "table stakes."

This is our marquee proof point. Lead with it.

Public CMS Star Ratings math

CMS Oct 2025 release + public methodology

- Star levels, forgone-bonus estimates, cliff-edge counts.
- Always labeled "**estimate from public CMS data**," with the humility line that the prospect knows their own picture better than we do.

How we position the company

Company positioning

- Dynamic Workforce Orchestration across **contact centers AND back offices**, six verticals.
- Never framed as a call-center-only tool.

PAUSED • INTERNAL ONLY

Real data, but not customer-facing yet

This is the change coming out of the Matt Graves session. These numbers are true internally and stay useful for targeting and prioritization — they just don't belong in a prospect's inbox in their current form.

- **Per-account Zuar / Greenlight savings, "Cost Taken Out," whitespace and maturity scores** — internal targeting only. The savings model is an internal average (assumed salary, assumed time, blended across accounts). Matt's read: customers "will call us on it," and financial-services buyers reject projected value almost every time.
- **Any dollar / percent / hours figure derived from that model** — do not send. We state what objectively happened and let the customer apply their own value; we don't tell them what their value will be.

WHAT WE'RE WAITING ON

What turns this into a comprehensive list

Four unlocks, each with a clear owner. As these land, the approved list grows past Humana.

1 • Quotable-customer list

- The list of who we **can** name — and, more practically, the exclusion list of who we **can't** (JPMorgan already confirmed never).
- Until it lands: **category-level framing only** ("a top-5 health plan"), Humana the sole named exception.

Owner: Sierra + Genna + Marketing (already requested in this thread)

2 • Activity-count value set

- The customer-safe replacement for the savings model: objective counts — actions per agent per day, coaching sessions, adherence and handle-time alerts — with the customer applying their own value.
- Being rebuilt with corrected denominators; sector-aware (healthcare leans on SLA/Stars, financial services on volume and time saved).

Owner: Josh + Matt Graves • I'll co-shape

3 • Industry benchmark data

- Matt's adoption reporting, with an industry filter added, so we can say "here's what this industry looks like on average" — live, not a static pull.
- Also unlocks peer-benchmark framing ("here's where you land vs peers").

Owner: Matt Graves (build in progress)

4 • Named-use clearance beyond Humana

- Contracts confirmation before any customer other than Humana is named, even in email. Spirit of the agreement, not just the letter.

Owner: Contracts / Marketing, via the list in #1

Net: the repository isn't shrinking in ambition — it's being rebuilt on ground customers can't dispute. Humana carries us today; the four unlocks above turn one proof point into a sector-by-sector library we can all pull from with confidence.

Intradiem · GTM Engineering · This replaces the prospect-facing use of the earlier repository files until the items above land. Internal targeting use of the underlying data is unchanged.
