

STAR RATINGS CAMPAIGN · LIVE BETA

# The Star Ratings outbound engine is live and in-market

Dallas built the full outbound motion in Clay in two days. The first waves are sending now. Here is the early read on volume, the first replies, and how it scales.

Prepared by Dallas Andrews · GTM Engineering · Jul 21, 2026 · Star Ratings beta, first week in-market

LIVE BETA

## Where it stands

Everything below is live-tool data from Clay as of today. Realized outcomes (meetings, pipeline) start logging as these first threads convert.

BUILD TIME

**2 days**

Built end to end in Clay

CAMPAIGNS LIVE

**3**

Persona waves sending

LEADS IN FLIGHT

**41**

Across the three campaigns

REPLIES

**4**

One a referral, three out-of-office

MEETINGS BOOKED

**0**

Small sample, reading it as directional

CLAY SPEND

**~\$59**

About 1% of the trial budget

EARLY SIGNAL

## The first replies

Four replies so far. Three were out-of-office auto-replies. The fourth is the one that matters.

### A referral straight to the buyer we want

Star Ratings motion · inbound reply, first week

- One reply is a **referral into a plan's Stars & CAHPS manager**, which is exactly the persona this motion is built to reach.

- The other three are out-of-office auto-replies, with warm follow-ups queued for when the contacts return.
- No meetings booked yet. At 41 sends this is a small sample, so the read is **directional, not a conversion rate**.

**Nathan is working the referral thread now.**

#### UNDER THE HOOD

## How the engine works, and where it scales

The point of the beta is not one campaign. It is a repeatable machine that a rep can run.

### How each email is built

- Sources the buying committee and scores account fit.
- Drafts each email off **the plan's own CMS Stars math**, with no unverified claims.
- Routes every batch to **Nathan for review before anything sends**. People judge, the engine drafts.

### Scale path

- The same build covers the full **32 sub-4.0 Star Ratings parents**.
- Each new wave is hours of work, not weeks, because the shared enrichment layer is already built.
- The model extends to the next motions on the same rails.

**Net:** the engine is built and in-market, deliverability is clean, and the first genuine reply put us in front of the right buyer. The next few weeks are about warming into higher volume and turning these first threads into meetings.
