

US OUTBOUND MOTION · STRATEGY & PROOF PLAN

Make outbound a funded function, and prove the ROI that scales it.

A deliberate, multichannel motion, proven by hand now so the investment to scale it is a decision we make with the numbers already in hand, not a bet.

Dallas Andrews · GTM Engineer · US motion with Nate (Nathan Belfield) · Star Ratings cliff accounts

We ran the full motion first, then saw its ceiling.

This plan isn't theory. We already took a complete motion to market through Clay, and running it end to end is what made the limit obvious.

WHAT WE RAN

A complete motion, live

Sourced, enriched, gated, written, and delivered through the Clay sequencer. A real motion, end to end, not a pilot.

WHAT IT SHOWED

Single-channel delivery

The sequencer sends one channel, email. Into VP and C-suite, email alone stalls; it rarely earns the reply or the meeting by itself.

WHERE IT POINTS

Outbound is multichannel

Single-channel isn't how outbound works. That's not an opinion now, it's what running the motion showed, and it's the foundation for everything that follows.

The takeaway: we keep what Clay and Claude already do well, the sourcing, enrichment, gating, and copy, and we fix the one thing the first motion exposed, delivery stuck in a single channel.

The principles this motion runs on.

Three principles separate a motion that generates net-new pipeline from one that just sends email.

PRINCIPLE 01

Behavior, not tools

Multichannel is a behavior, not a tool. We run it by hand now to prove the ROI, so buying Lemlist to scale it is a de-risked decision, not a bet.

PRINCIPLE 02

Email is not the motion

Email alone doesn't generate net-new pipeline into VP and C-suite. LinkedIn, voice, and calls are where net-new is won.

PRINCIPLE 03

Driven, not handed off

A sequence handed over and checked on occasionally stalls. We drive one motion daily as the rep's pit crew, with a live scoreboard.

Who builds it, who runs it, in what order.

Dallas engineers the motion; the BDRs execute it. Every channel is built to be as easy to run as an email.

TRACK 1 · PRIORITY NOW

US · Nate

Star Ratings cliff accounts. US-only CMS trigger, the cleanest signal in the book. The lowest-risk proof and the priority are the same motion.

TRACK 2 · AFTER US PROOF

UK · Jack

A separate design: no Star Ratings trigger, and cold outbound carries GDPR/PECR weight, so the mix leans LinkedIn and WhatsApp. Built once US produces.

The engine's real product is a frictionless multichannel package, written and ready per contact per day. Nate is a known, trusted operator, so the only variable this proof tests is the motion itself.

Own it now, add tools as they earn their place.

n8n owns the seams between tools only. Logic inside a tool stays native to it. That discipline keeps the stack from becoming fragile tech for its own sake.

Nate · Star Ratings · a small, high-stakes, account-based slice.

ACCOUNT	FORGONE QBP (EST.)	SEATS WORKED	WAVE
Centene	\$75.5M	5 · Ops, Member Experience, Medicare Ops	A / B / C

FORGONE QBP ACROSS
THE SLICE

Not volume, proof

TWO SEATS PER
ACCOUNT

Forgone QBP estimated from public CMS data; each plan knows its exact figure better than we do. Not an Intradiem claim.

Multichannel, two message tracks, staggered.

CHANNELS

LinkedIn-first

Connect, note, voice note, then a call. Email is the supporting channel, kept within an inbox-safe cap.

MESSAGE

Two tracks

Ops and Member Experience hear the in-the-moment capacity lever. Finance hears the QBP-recovery and payback math.

CADENCE

Four touches

Day 1 email, Day 2 connect, Day 4 voice note, Day 6 call. Waves staggered so no day is bursty.

Success is defined up front: replies and live conversations, not just booked meetings, over a real window. A sharp reply in week two is proof the motion works even if the invite lands in week four.

The guardrails protecting every send.

The motion runs inside standing guardrails, so it moves fast without ever putting the brand or the install base at risk.

IN PLACE

Customer exclusion. Current customers are automatically held out of every campaign, so the install base is never at risk of a cold touch, confirmed on live rows before every send.

IN PLACE

Verified claims. The only proof used is Humana's public figures: about two hours of capacity per agent per month, and seven times ROI five years in. No unverified numbers reach a prospect.

IN PLACE

Deliverability. Sending health is monitored: LinkedIn-first, email kept within a verified inbox-safe volume, so domain reputation stays protected.

IN PLACE

Copy quality. Every message clears an adversarial quality gate before it ships, so what reaches a prospect is already pressure-tested.

What proof earns, and in what order.

Nothing is bought on theory. Each ask is backed by the result of the step before it.

Authority · to shape together

Once the proof is in, worth deciding together whether this becomes the standard play for both BDRs. Bottom-up proof first, then we shape the mandate.

Tool · Ask #1 · Lemlist · pursuing now

The manual proof shows the ROI and that the motion scales. Lemlist turns a proven motion into daily capacity across both BDRs and lets a hand-run motion 10x without adding people. The sooner it's funded, the sooner the motion that works runs every day.

Tool · Ask #2 · n8n

Once the base motion produces: no-open triggers a call, a booked meeting auto-builds the brief and agenda, the post-call transcript drafts the follow-up.

The roadmap.

Now

Prove it

Nate runs the motion, LinkedIn-first. 15 contacts, 6 accounts, multithreaded. Daily package and live scoreboard. The Lemlist ROI case is built in parallel off that scoreboard.

Fund

Scale it with Lemlist

Purchase approved on the proven ROI. Lemlist removes the manual ceiling, both BDRs run it daily at volume, and the UK motion with Jack launches.

Then

Close the loop

n8n adds behavior-driven triggers. Meeting handoff automated end to end, every outcome documented and fed back, outbound a funded, instrumented function.

We run GTM the way our product runs operations: **real-time signals, automated action, a human gate before anything irreversible.**

We prove it by hand first, then let the tools scale what already works, so we become the first live proof of what we sell. This is a head start, not a finished product; the build compounds weekly.
