ENROLLMENT
SEASON, THE
HEAVIEST
WEEKS OF THE
YEAR

Why Aflac, why now

Motion: Cost-Mandate / Efficiency (cost_mandate_xvert) · **Product angle:** Queue Optimizer for the customer care centers, Back Office Optimizer for claims and shared services · **Target:** Aflac (Aflac U.S.) · **AE:** Mike Regan · **Status:** send-ready draft, human approval gate not yet cleared; all 8 emails Clay waterfall first pass and ZeroBounce-swept Jul 16: 8/8 valid, no flags

The forcing function

Aflac's growth is landing exactly where service intensity is highest, while its own releases show the expense envelope held flat. By the Q1 2026 earnings call, group life, absence, and disability grew 25% and group products (voluntary benefits, vision, dental) grew 12.4%, the most service-heavy lines in the portfolio: absence management and disability run on calls, documentation, and turnaround. In the same quarter, total acquisition and operating expenses came in at \$1.29B, down 1.5% year over year, while the U.S. expense ratio drew scrutiny at 38.3%, up 70 basis points, with U.S. pretax margin down 40 basis points. Growth compounding in the highest-touch products, expenses held flat, and open enrollment season, the heaviest weeks of the service year, arrives in Q4. The gap between those curves is workforce execution across the care centers and the claims floors.

The one thesis every seat hears: The capacity to absorb the group ramp without a req already exists inside each service day, the paid idle minutes between calls and work items, recovered in real time. Each seat hears it from their own floor. Aflac is a confirmed non-customer (not in the Jul 10 active-customer file).

Merge fields: {{sender}} first name, Touches 1-3 and voicemail intros · {{sender_full_name}} Touches 4-5.

Account snapshot

ITEM	VALUE	SOURCE
Group life, absence, disability sales	+25% YoY, Q1 2026	Aflac Q1 2026 earnings call, Apr 30 2026
Group products (core VB, vision, dental)	+12.4% YoY, Q1 2026	Q1 2026 earnings call
U.S. net earned premiums	\$1.555B, +3.5% YoY	Q1 2026 release, Apr 29 2026
U.S. sales	\$318M, +2.9% YoY	Q1 2026 release
Total acquisition and operating expenses	\$1.289B, down 1.5% YoY	Q1 2026 release
U.S. expense ratio	38.3%, up 70 bps YoY; U.S. pretax margin 20.4%, down 40 bps	Q1 2026 call (CFO Max Broden on drivers)
Agent engine	10,000-11,000 new agents expected recruited this year; productivity +8%	Q1 2026 call (Virgil Miller)
Scale	~18,000 employees; Columbus GA HQ (individual), Hartford CT and Columbia SC hubs (group)	Public profiles, company statements
Brand promise	Fast claims payment is the public identity of the franchise	Aflac public positioning
Seasonal clock	Open enrollment (Q4) is the heaviest service and processing season of the year	Industry structural fact
Customer status	Confirmed non-customer, eligible for new-logo motion	Active-customer file, Jul 10

Why now: the group book's growth is a choice Aflac made and is winning, and it lands as calls, claims, documentation, and absence administration on floors whose expense envelope its own release shows flat to down. Open enrollment is one quarter away; capacity work that starts now is in place for the heaviest weeks of the year, and recovered idle capacity books against the expense ratio without a headcount decision in either direction.

Internal targeting note (never in copy): no layoff or restructuring event exists at Aflac, so this runs as the soft-mandate variant: expense-ratio scrutiny plus growth absorption, never manufactured urgency. Hartford and Columbia SC are the group-side floors (the +25% book); Columbus is individual claims and customer solutions. Wilks (Shared Services, Oct 2025) and Fradkin (SVP Group Benefits, Feb 2025) are both new-ish seats building their first full-year plans. "One Day Pay" stays out of copy: 2015-era marketing, unverified as current. The agent engine (10-11k recruits/yr) multiplies service load on support floors; usable as context in Bain's and Wilks's copy only as Aflac's own disclosure.

Buying committee

LinkedIn: Cyr /in/kyle-a-cyr/ · Johnson /in/juanita-johnson-leadershiplegacy/ · McClellan /in/kate-mcclellan-011310188/ · Barnes /in/jennifer-barnes-43176ba/ · Wilks /in/eddie-wilks-6a04a431/ · Bain /in/tashia-bain-8281b84/ · Fradkin /in/michael-fradkin-24a474164/ · Funk /in/justin-funk-19687aa2/

Messaging level: company-level narrative from Aflac's own releases for every seat. No org-structure claims: Hartford/Columbus geography stays out of copy except where a contact's own public title carries it. The two Hartford care-center directors (Cyr, McClellan) get different theses (growth absorption vs. coaching survival) and never enter the same day.

Bench (second ring, fresh one-off pull on Nathan's go): Bob Ruff (SVP Group Voluntary Benefits), Kerry Flack (VP Group Voluntary Benefits), Eric Stevens and Martha-Ellen Sutton (Directors, Claims Operations, group side), Matt T. (Director of Operations, Leave of Absence; full surname unverified, resolve before outreach).

What reps can and cannot say

Say: every figure in the snapshot table, always attributed to Aflac's own releases and calls ("by your April release"); what Intradiem is; that open enrollment is the industry's heaviest service season; and, in replies only, the Humana story as Humana told it publicly (first-year in-year return, 7X ROI five years in, 2 hours of capacity per agent per month, public SWPP webinar).

Do not say: any Intradiem-computed savings, ROI, idle-percentage, or recovered-capacity number for Aflac; any customer outcome except Humana's; any claim about Aflac's org structure, internal tooling, WFM vendor, or site roles; "One Day Pay" (2015 marketing, unverified as current); any layoff or cost-cutting event (none exists; the pressure is the expense ratio and the flat envelope, in their numbers only).

Brand-light window: Intradiem out of Touch 1-3 email and LinkedIn bodies (voicemail intro names it per template), named from Touch 4.

Cadence and committee entry

Five touches per contact across ~9 business days: **T1** Email 1 · **T2 (+1d)** LinkedIn connect · **T3 (+3d)** Voicemail + LinkedIn message · **T4 (+5d)** Email 2, new angle · **T5 (+8d)** Breakup. Every voicemail touch carries an if-they-answer live script; a pickup runs the script, never a read-out of the message.

Extended arc, must-win seats only (Wilks and Fradkin): after Touch 4 the arc escalates before the breakup: **live call #1** (full script), **live call #2** (short), **pattern interrupt** (different format), then the breakup lands as the hail-mary. Escalation order is soft to direct to persistent, never inverted to hit a date.

Staggered entry: **Cyr and Johnson Day 1, McClellan and Barnes Day 2, Wilks and Bain Day 3, Fradkin and Funk Day 4.** Floor operators open the account, the economic and executive seats enter after the floor has had time to mention the outreach internally. Eight sequences carry eight different openers and eight different CTAs, so side-by-side forwards inside Aflac read as one thesis from eight chairs, not a blast. Subjects never repeat across contacts; send hours stagger within each day. If an email is at deliverability risk, the LinkedIn touch carries the opener.

Kyle Cyr

Director, Customer Care Center

TOUCH 1 (DAY 1) · EMAIL

Subject: the growth lands on your queues

Kyle, by Aflac's own April call the group book is the growth engine now, group life, absence, and disability up 25% in a quarter. Those aren't quiet products. Absence and disability run on calls, follow-ups, and documentation chases, and that volume lands on care center queues while the same release shows the enterprise expense line held flat. A director's version of that math is simple: more work per person, same roster, and the schedule already spoken for. The one capacity source that absorbs it without a req is the idle minutes already inside each day, the gaps between calls that nothing currently acts on. Worth fifteen minutes on where those minutes sit across your queues?

{{sender}}

TOUCH 2 (DAY 2) · LINKEDIN CONNECTION REQUEST

Kyle, I work the gap between what the schedule plans and what a care center floor actually needs hour to hour, which gets expensive when a book grows the way Aflac's group business is growing. Seemed worth connecting.

TOUCH 3 (DAY 4) · VOICEMAIL

Kyle, this is {{sender}} with Intradiem. I sent you a note on the group growth landing on care center queues, and the one capacity source that absorbs it without a req: the idle minutes already inside each day, recovered in real time for work, coaching, or the next spike. I'm at [number], or reply to the email. Thanks Kyle.

TOUCH 3 (DAY 4) · IF THEY ANSWER (LIVE SCRIPT)

OPENER

Kyle, this is {{sender}} with Intradiem. I sent you a note this week on the group volume. Can I take thirty seconds live?

THE THIRTY SECONDS

Aflac's group book grew 25% on the absence and disability side by the April call, and those products run on calls and follow-ups, so the growth lands on queues like yours while the expense line stays flat. The only capacity that closes that gap without a hire is the idle minutes already inside each day, acted on in real time. That's the whole note.

CLOSE

Worth fifteen minutes on where those minutes sit across your queues?

TOUCH 3 (DAY 4) · LINKEDIN MESSAGE

Kyle, left you a voicemail too. Short version: the group growth is a volume curve, the expense line is flat, and the difference gets paid on your floor. The minutes between calls are the only capacity that closes it without a req. Fifteen minutes on where they sit?

TOUCH 4 (DAY 6) · EMAIL

Subject: before enrollment season spends it

Hi Kyle, one thing about timing. Open enrollment is a quarter away, and it's the stretch where every care center runs its hardest weeks of the year. The floors that get through it clean are the ones that walk in with recoverable capacity already mapped, because the minutes between calls are the only reserve that doesn't need a req approved by September. That's what Intradiem does: real-time orchestration on top of the WFM you already run, so the same roster absorbs the season. Fifteen minutes and I'll walk which queues usually carry the most.

{{sender_full_name}}

Subject: leaving it here

Hi Kyle, I'll stop here. One thought worth keeping: the group book isn't going to stop growing because the schedule is full, and the difference between a floor that absorbs that and one that eats it is what happens to the minutes nothing acts on. When that becomes the conversation on your floor, this seam is where I spend my time. Glad to help whenever it's useful.

{{sender_full_name}}

Juanita Johnson

Director, Claims Operations

TOUCH 1 (DAY 1) · EMAIL

Subject: the promise your floor keeps

Juanita, Aflac's whole franchise runs on one operational promise: when a policyholder files a claim, the money moves fast. That promise is kept or broken on claims floors, in the hours between a claim arriving and a decision going out, and it gets hardest to keep in exactly the weeks volume spikes. With the company growing premiums while its own release shows the expense line held flat, the floors are being asked to keep the promise with the roster they have. The capacity to do that already exists inside the day, the paid minutes between work items that nothing acts on. Worth fifteen minutes on which of your claim queues carry the most?

{{sender}}

TOUCH 2 (DAY 2) · LINKEDIN CONNECTION REQUEST

Juanita, I work the recoverable-capacity side of claims operations, the idle minutes inside a processing day that turn into throughput when something acts on them in real time. Given you run claims ops at Aflac, seemed worth connecting.

TOUCH 3 (DAY 4) · VOICEMAIL

Juanita, this is {{sender}} with Intradiem. I sent you a note on the fast-claims promise and the capacity that keeps it during spike weeks: the paid idle minutes already inside the processing day, recovered in real time, no headcount decision. I'm at [number], or reply to the email. Thanks Juanita.

TOUCH 3 (DAY 4) · IF THEY ANSWER (LIVE SCRIPT)

OPENER

Juanita, this is {{sender}} with Intradiem. I sent you a note on the claims floor. Thirty seconds, and you tell me if it's worth more?

THE THIRTY SECONDS

The brand promise is speed, and it's kept on your floor in the hours between arrival and decision. When volume spikes, the only capacity that holds turnaround without adding examiners is the idle minutes already inside each day, recovered in real time and pointed at the queue that's backing up. That's the layer I work.

CLOSE

Worth fifteen minutes on which claim queues carry the most recoverable time?

TOUCH 3 (DAY 4) · LINKEDIN MESSAGE

Juanita, left you a voicemail too. Short version: turnaround during spike weeks is decided by what happens to the minutes between work items, and recovering them in real time is cheaper than any other capacity a claims floor can buy. Fifteen minutes on where they sit?

TOUCH 4 (DAY 6) · EMAIL

Subject: the automation that skips the humans

Hi Juanita, most claims automation works the transaction: intake, adjudication rules, document handling. What it never touches is the people-minutes around the transactions, the gaps between work items across a processing floor, because those belong to humans, not systems. Intradiem recovers exactly that, in real time, on top of whatever the floor already runs, and it converts directly into turnaround during the weeks the promise is hardest to keep. Fifteen minutes and I'll walk where claims operations usually find it.

{{sender_full_name}}

Subject: stopping here

Hi Juanita, I'll stop for now. One parting thought: every claims floor eventually automates the transactions, and what's left is the human minutes around them, paid for every day and never booked. That's the cheapest turnaround in the building. When it's worth a look, that's the seam I work. Glad to help whenever the timing's right.

{{sender_full_name}}

Kate McClellan

Customer Care Director

TOUCH 1 (DAY 2) · EMAIL

Subject: what growth quarters cut first

Kate, five-plus years running care at Aflac means you've watched the group business scale in real time, and you know what a growth quarter quietly costs a floor: coaching. When volume climbs 25% on the absence and disability side, by Aflac's own April call, and the expense envelope stays flat, the first thing sacrificed is the off-phone time that keeps quality from eroding two quarters later. The counter isn't a req. It's recovering the idle minutes already inside each day and pointing them at coaching and the next spike, in real time. Worth fifteen minutes on how floors your size fund coaching from inside the schedule?

{{sender}}

TOUCH 2 (DAY 3) · LINKEDIN CONNECTION REQUEST

Kate, sent you a note on what growth quarters do to coaching time on a care floor, and the capacity that funds it without a req. Given your tenure running care at Aflac, would value connecting.

TOUCH 3 (DAY 5) · VOICEMAIL

Kate, this is {{sender}} with Intradiem. I sent you a note on the coaching squeeze, growth landing on the floor while the expense line stays flat, and how the idle minutes already inside each day can fund the coaching instead of disappearing into shrinkage. I'm at [number], or reply to the email. Thanks Kate.

TOUCH 3 (DAY 5) · IF THEY ANSWER (LIVE SCRIPT)

OPENER

Kate, this is {{sender}} with Intradiem. I sent you a note on the coaching squeeze. Got thirty seconds?

THE THIRTY SECONDS

Growth quarters take coaching time first, and the quality bill arrives two quarters later. The minutes to protect it already exist inside each day, the gaps between calls nothing acts on. Recovered in real time, they fund the coaching and absorb the spikes with the roster you already have. That's what I work.

CLOSE

Worth fifteen minutes on how floors your size fund coaching from inside the schedule?

TOUCH 3 (DAY 5) · LINKEDIN MESSAGE

Kate, left you a voicemail too. Short version: growth eats coaching first, quality pays for it later, and the fix is capacity already sitting inside the day. Fifteen minutes on where it sits for your teams?

TOUCH 4 (DAY 7) · EMAIL

Subject: the quality bill arrives in Q1

Hi Kate, the pattern every care leader recognizes: the floor absorbs a growth year quietly, coaching slides, and the quality and attrition numbers move after the season ends, when the fix costs most. The cheaper version is upstream: recover the idle minutes in real time so the coaching happens during the growth, not after it. That's Intradiem, an overlay on the WFM you already run, contact center and the follow-up work behind it. Fifteen minutes and I'll walk how the quality measures connect to the minutes.

{{sender_full_name}}

Subject: last note

Hi Kate, I'll leave it here. One parting thought: rosters and budgets reset every year, but the minutes between calls are on the payroll every single day, and the floors that recover them ride out growth years instead of being reshaped by them. After five years in that seat you'll see the next season coming before anyone. When it's worth a look, that's where I spend my time.

{{sender_full_name}}

Jennifer Barnes

AVP, Life Claims

TOUCH 1 (DAY 2) · EMAIL

Subject: turnaround is the product

Jennifer, in life claims the operational metric and the human moment are the same thing: a family is waiting, and turnaround is the product. Aflac is growing premiums with an expense line its own release shows flat to down, which means the claims floors carry the difference during every spike week without a bigger roster. The capacity that holds turnaround in those weeks already exists inside the day, the paid minutes between work items, recovered in real time and pointed at the queue that's aging. Worth fifteen minutes on where that capacity sits across life claims?

{{sender}}

TOUCH 2 (DAY 3) · LINKEDIN CONNECTION REQUEST

Jennifer, sent you a note on holding claims turnaround through spike weeks with capacity that's already on the payroll. Given you lead life claims at Aflac, would value connecting here too.

TOUCH 3 (DAY 5) · VOICEMAIL

Jennifer, this is {{sender}} with Intradiem. I sent you a note on turnaround as the product in life claims, and the capacity that holds it during spike weeks: the idle minutes already inside the processing day, recovered in real time. No headcount decision either way. I'm at [number], or reply to the email. Thanks Jennifer.

TOUCH 3 (DAY 5) · IF THEY ANSWER (LIVE SCRIPT)

OPENER

Jennifer, this is {{sender}} with Intradiem. I sent you a note on life claims turnaround. Can I take thirty seconds?

THE THIRTY SECONDS

In life claims the metric is the moment: a family waits exactly as long as the queue says. Spike weeks stretch that, and the only capacity that holds it without adding examiners is the idle minutes already inside each day, recovered in real time and moved to the aging queue. It rides on top of whatever the floor runs now.

CLOSE

Worth fifteen minutes on where that capacity sits across life claims?

TOUCH 3 (DAY 5) · LINKEDIN MESSAGE

Jennifer, left you a voicemail as well. Short version: turnaround is the product, spike weeks are the test, and the minutes between work items are the only capacity that's already paid for. Fifteen minutes on where they sit?

TOUCH 4 (DAY 7) · EMAIL

Subject: what the flat expense line means downstream

Hi Jennifer, one framing from the operations side of a growth year. When the enterprise holds expenses flat while premiums grow, by Aflac's own release, nobody sends the claims floor a memo; the floor just feels it as more volume per person. The teams that stay ahead of that are the ones that convert their own idle minutes into throughput before the backlog forms, not after. That's the layer Intradiem runs, in real time, across processing and the calls around it. Fifteen minutes and I'll walk where life claims operations usually find it.

{{sender_full_name}}

Subject: before I close the file

Hi Jennifer, I'll stop here. One parting thought: a backlog announces itself weeks after the capacity to prevent it was already on the floor, idle and unbooked. Recovering those minutes is the cheapest turnaround a claims operation will ever buy. When that's worth a look, that's the seam I work. Glad to help whenever the timing fits.

{{sender_full_name}}

Eddie Wilks

Vice President, Shared
Services

EXTENDED ARC (MUST-WIN)

TOUCH 1 (DAY 3) · EMAIL

Subject: the line your first plan won't price

Eddie, building a shared-services plan in a year like Aflac's means pricing the structural levers: systems, spans, vendors. By the company's own April release the enterprise is holding expenses flat, \$1.29B in acquisition and operating costs, down 1.5%, while premiums grow, so every support floor is quietly absorbing more work per person. The line that almost never makes a program plan is the paid idle capacity already inside those floors, the minutes between work items that never get priced because booking them needs no hire, no cut, and no migration. Recovered in real time, they're the cheapest capacity in shared services. Worth fifteen minutes on where that line sits across your operation?

{{sender}}

TOUCH 2 (DAY 4) · LINKEDIN CONNECTION REQUEST

Eddie, I work the recoverable-capacity side of shared services, the idle minutes inside processing floors that a flat expense year can book without a headcount decision. New plan year on your side, seemed worth connecting.

TOUCH 3 (DAY 6) · VOICEMAIL

Eddie, this is {{sender}} with Intradiem. I sent you a note on the line shared-services plans never price: the paid idle minutes inside the processing day, recovered in real time and booked against a flat expense envelope without a headcount decision. I'm at [number], or just reply to the email. Thanks Eddie.

TOUCH 3 (DAY 6) · IF THEY ANSWER (LIVE SCRIPT)

OPENER

Eddie, this is {{sender}} with Intradiem. I sent you a note this week on the shared-services plan. Can I take thirty seconds live?

THE THIRTY SECONDS

Plans price the structural levers, systems, spans, vendors. The line they never price is the paid idle minutes between work items across the support floors, and in a year where Aflac's own release shows expenses held flat while premiums grow, that line is the cheapest capacity in the building. Booking it needs no hire and no cut.

CLOSE

Worth fifteen minutes on where it sits across shared services?

TOUCH 3 (DAY 6) · LINKEDIN MESSAGE

Eddie, left you a voicemail too. Short version: the expense envelope is flat, the volume isn't, and the one lever that serves both is the idle minutes already inside the support floors' day. Fifteen minutes on where that sits for you?

TOUCH 4 (DAY 8) · EMAIL

Subject: capacity that books this year

Hi Eddie, one thing about timing that matters for a first full-year plan. Most shared-services levers are structural: they need a project, a vendor cycle, or a re-org before a dollar moves. Recovered idle capacity is the exception, because the minutes are already paid for and already inside the schedule; converting them into completed work shows up in the same year the decision is made. That's the piece Intradiem works, real-time recovery across the back office and the care centers, on top of the stack you already run. Fifteen minutes and I'll walk where operations Aflac's size usually find it.

{{sender_full_name}}

TOUCH 5 (DAY 10) · LIVE CALL #1, FULL SCRIPT

OPENER (ASK PERMISSION, THEN STOP TALKING)

Eddie, this is {{sender}} with Intradiem. I know I'm calling cold. Thirty seconds, and you tell me if it's worth more?

THE THIRTY SECONDS

You're building shared services' plan in a year where Aflac's own release shows the expense line flat, down 1.5%, while premiums and the group book grow. The structural levers are all slow, and the one line that books this year is the paid idle minutes already inside the support floors, recovered in real time, no hire, no cut, no migration. I'm asking for fifteen minutes on where that line usually sits at your scale.

IF "WE ALREADY RUN AUTOMATION"

It covers the transactions. This is the people-minutes around them, the half a bot can't touch because it belongs to humans between work items. They stack.

IF "NO BUDGET"

That's the point of this line. It books against the flat envelope instead of asking to grow it, and if it can't pay for itself inside the year, fifteen minutes proves that too.

IF "SEND ME SOMETHING"

Will do, and the one thing a deck can't answer is where the minutes sit across your floors. That's the fifteen-minute part.

CLOSE

Does Thursday work, or is early next week better?

TOUCH 6 (DAY 12) · LIVE CALL #2, SHORT SCRIPT

Eddie, {{sender}} at Intradiem again, I'll be quick. You've had two notes and a voicemail from me on one idea: the idle minutes inside your support floors are the cheapest line against a flat expense year, and they book without a headcount decision. Fifteen minutes shows where they sit. If it's a no, tell me no and I'll close the file. Fair enough?

TOUCH 7 (DAY 13) · PATTERN INTERRUPT: THREE-LINE EMAIL

Subject: three numbers

Expenses down 1.5% by your own release. Group book up 25%. Zero new heads required to close that gap.

That's the whole argument. Fifteen minutes tests whether it holds at Aflac.

{{sender_full_name}}

Subject: leaving it with you

Hi Eddie, I'll stop here. One parting thought: every shared-services plan eventually runs out of structural levers, and what's left on the table is the people-minutes around the work, paid for every day and never booked. First plans that claim that line early never have to defend it later. Glad to help whenever the timing's right.

{{sender_full_name}}

Tashia Bain

VP, Infrastructure, Operations & Cloud

TOUCH 1 (DAY 3) · EMAIL

Subject: the layer the platforms don't run

Tashia, the operations stack you run plans the day, routes the work, and reports on what happened. What none of it does is act inside the day, in the minutes between scheduled work, when conditions shift faster than the plan. That gap costs more in a year like this one, where Aflac's own releases show the group book growing 25% on the service-heavy side while the expense envelope stays flat, so the floors absorb the difference in real time. There's a workforce layer that closes it, riding on the platforms and cloud footprint you already own, standard integrations, no rip-and-replace. Worth fifteen minutes on how it plugs into your stack?

{{sender}}

TOUCH 2 (DAY 4) · LINKEDIN CONNECTION REQUEST

Tashia, sent you a note on the layer operations stacks watch but don't act on, the real-time piece between the platforms and the floor. Given you own infrastructure and ops at Aflac, seemed worth connecting.

TOUCH 3 (DAY 6) · VOICEMAIL

Tashia, this is {{sender}} with Intradiem. I sent you a note on the layer that acts inside the day, on the minutes between scheduled work, riding on the platforms you already run rather than replacing any of them. I'm at [number], or reply to the email. Thanks Tashia.

TOUCH 3 (DAY 6) · IF THEY ANSWER (LIVE SCRIPT)

OPENER

Tashia, this is {{sender}} with Intradiem. I sent you a note on the operations stack. Got thirty seconds?

THE THIRTY SECONDS

Everything in the stack plans the day, routes the work, or reports on it after. Nothing acts inside the day, in the minutes between scheduled work. There's a workforce layer that does exactly that, riding on the WFM, telephony, and cloud footprint you already own. Overlay, not a migration, and it converts directly into the capacity the floors need this year.

CLOSE

Worth fifteen minutes on the integration view with your stack?

TOUCH 3 (DAY 6) · LINKEDIN MESSAGE

Tashia, left you a voicemail too. Short version: the stack plans and reports, nothing acts in the gaps in real time, and that's the layer I work, on top of what you already own. Fifteen minutes on the integration view?

TOUCH 4 (DAY 8) · EMAIL

Subject: automation Aflac already believes in

Hi Tashia, Aflac's own results lean on scale and productivity, ten to eleven thousand agents recruited a year with productivity up 8% by the April call, so the thesis is already bought internally: find the capacity the operation already pays for and put it to work. Intradiem applies that thesis to the service workforce itself, real-time orchestration of the minutes between work, running as an overlay on the platforms you own. Technically it's an integration conversation, not a replacement one. Fifteen minutes and I'll walk the architecture view against your stack.

{{sender_full_name}}

Subject: one last thought

Hi Tashia, I'll stop here. One parting thought: every platform in the stack gets replaced eventually, and the minutes between scheduled work survive every migration, because plans and reports don't act. The cheapest capacity in the operation lives in that seam, and it's an overlay away. When it becomes worth a look, that's where I spend my time.

{{sender_full_name}}

Michael Fradkin

SVP, Group Benefits

EXTENDED ARC (MUST-WIN)

TOUCH 1 (DAY 4) · EMAIL

Subject: the growth you own runs on service

Michael, the group book you run is Aflac's growth story by the company's own April call: group life, absence, and disability up 25%, group products up 12.4%. Those are also the most operationally demanding products in the portfolio. Absence management is won or lost on turnaround, calls, and follow-through, which means the growth you're winning converts into service load on floors whose expense envelope the same release shows flat. Sustaining the win is a workforce execution question, and the capacity to hold it already exists inside each service day. Worth fifteen minutes on what holding service through the ramp returns on the book you own?

{{sender}}

TOUCH 2 (DAY 5) · LINKEDIN CONNECTION REQUEST

Michael, I work the execution side of group benefits growth, the service floors where absence and disability books are actually won after the sale. With Aflac's group business compounding, would value connecting.

TOUCH 3 (DAY 7) · VOICEMAIL

Michael, this is {{sender}} with Intradiem. I sent you a note on the group ramp, growth landing as service load on flat-envelope floors, and the capacity that sustains it without a req: the idle minutes already inside each day, recovered in real time. Fifteen minutes on what that returns on your book? I'm at [number]. Thanks Michael.

TOUCH 3 (DAY 7) · IF THEY ANSWER (LIVE SCRIPT)

OPENER

Michael, this is {{sender}} with Intradiem. I sent you a note on the group ramp. Thirty seconds, and you tell me if it's worth more?

THE THIRTY SECONDS

The group book grew 25% on absence and disability by the April call, and those products are service businesses after the sale: turnaround, calls, follow-through. The expense envelope is flat by the same release, so the floors carry the growth. The capacity that sustains it is the idle minutes already inside each day, orchestrated in real time. That's what protects the book you're growing.

CLOSE

Worth fifteen minutes on what holding service through the ramp returns?

TOUCH 3 (DAY 7) · LINKEDIN MESSAGE

Michael, left you a voicemail too. Short version: the group growth is a service commitment, the expense line is flat, and the gap is closed by capacity already on the payroll. Fifteen minutes on what that returns on your book?

TOUCH 4 (DAY 9) · EMAIL

Subject: renewals are won on the floor

Hi Michael, one step past the growth math. Group benefits renew on experience: employers judge the book by what their employees felt at claim time and what their HR teams felt at enrollment. A ramp that outruns its service floors wins the sale and loses the renewal, quietly, a year later. Holding the floors steady through the ramp, with capacity recovered in real time from inside each day, is the cheapest renewal protection the book can buy, and enrollment season is one quarter away. Fifteen minutes and I'll walk how the service execution connects to the book's economics.

{{sender_full_name}}

TOUCH 5 (DAY 11) · LIVE CALL #1, FULL SCRIPT

OPENER (ASK PERMISSION, THEN STOP TALKING)

Michael, this is {{sender}} with Intradiem. I know I'm calling cold. Thirty seconds, and you decide if it's worth more?

THE THIRTY SECONDS

You own the fastest-growing book at Aflac, and by the company's own numbers it's growing exactly where service intensity is highest, absence and disability up 25%, with the expense envelope flat. That growth converts to renewals only if the service floors hold through the ramp and through enrollment season, and the capacity that holds them is the idle minutes already inside each day, recovered in real time. No req, no platform swap. I'm asking for fifteen minutes on what that returns on your book.

IF "THAT'S AN OPERATIONS CONVERSATION"

The floors run it, and the book pays for it. Whether the growth you're winning survives its own service load is a book-owner call, which is why I called you first.

IF "WE'RE INVESTING IN THE PLATFORM ALREADY"

Keep investing. Platforms plan and route; nothing in them acts inside the day when conditions shift. This is that layer, riding on what you're building.

IF "SEND ME SOMETHING"

Will do, and the one thing a deck can't answer is where the ramp is outrunning the floors today. That's the fifteen-minute part.

CLOSE

Does Thursday work, or is early next week better?

TOUCH 6 (DAY 13) · LIVE CALL #2, SHORT SCRIPT

Michael, {{sender}} at Intradiem again, quick one. You've had two notes and a voicemail on the same idea: the group growth is a service commitment, the envelope is flat, and the floors decide whether the book renews. Fifteen minutes on what holding them returns. If it's a no, say no and I'm gone. Fair?

TOUCH 7 (DAY 14) · PATTERN INTERRUPT: LINKEDIN VOICE NOTE (WITH TEXT TL;DL)

Voice note (~25s): Michael, {{sender}} with Intradiem. One thought, twenty seconds. Twenty-five percent growth in absence and disability, a flat expense line, and enrollment season a quarter out. The book's renewals are being decided on the service floors right now, with capacity that's already on the payroll. Fifteen minutes whenever it's worth it.

Text TL;DL (same message): The group book's renewals are decided on the service floors, and the capacity to hold them through the ramp is already on the payroll. Fifteen minutes whenever it's worth it.

TOUCH 8 (DAY 16) · BREAKUP EMAIL (HAIL-MARY)

Subject: final note

Hi Michael, I'll stop here. One parting thought: growth books rarely die at the sale, they die at the first renewal, on service experiences that happened a year earlier during the ramp. The floors that prevent that are the ones that recover capacity while the growth is happening, not after. When protecting the ramp becomes the priority, that's the seam I work. Glad to help whenever the timing is right.

Justin Funk

VP, National Accounts Customer Experience

TOUCH 1 (DAY 4) · EMAIL

Subject: your accounts feel it first

Justin, national accounts are where service strain shows first, because the biggest employers measure everything and benchmark every carrier they run. By Aflac's own April numbers the group book is compounding, up 25% on the absence and disability side, while the expense envelope holds flat, and that math lands as longer queues and slower follow-ups exactly where the stakes are highest. The counter is capacity that already exists: the idle minutes inside each service day, recovered in real time so the experience your accounts measure holds through the ramp. Worth fifteen minutes on where experience erodes first as national-account volume scales?

{{sender}}

TOUCH 2 (DAY 5) · LINKEDIN CONNECTION REQUEST

Justin, sent you a note on the experience side of Aflac's group ramp, the part your largest accounts measure and benchmark. Worth connecting here too.

TOUCH 3 (DAY 7) · VOICEMAIL

Justin, this is {{sender}} with Intradiem. I sent you a note on national-account experience through the group ramp, and the capacity that holds it without a req: the idle minutes already inside each service day, recovered in real time. Fifteen minutes on where experience erodes first at scale? I'm at [number]. Thanks Justin.

TOUCH 3 (DAY 7) · IF THEY ANSWER (LIVE SCRIPT)

OPENER

Justin, this is {{sender}} with Intradiem. I sent you a note on national-account experience. Thirty seconds live?

THE THIRTY SECONDS

Your largest accounts measure service and compare carriers, and the group ramp is landing volume on the floors that serve them while the expense line stays flat. Experience erodes quietly, then shows up in a stewardship meeting with a benchmark attached. The capacity that prevents it is the idle minutes already inside each day, recovered in real time.

CLOSE

Worth fifteen minutes on where experience usually erodes first at national-account scale?

TOUCH 3 (DAY 7) · LINKEDIN MESSAGE

Justin, left you a voicemail too. Short version: your accounts benchmark everything, the ramp is loading the floors that serve them, and the only headcount-free counter is recovering the minutes already inside the day. Fifteen minutes on where it's tightest?

TOUCH 4 (DAY 9) · EMAIL

Subject: stewardship meetings keep score

Hi Justin, the uncomfortable mechanics of national-account experience: nobody calls to complain, they just bring the service scorecard to the stewardship meeting, next to a competitor's. By then the erosion is a renewal conversation, not an operations one. The cheap fix is upstream and real-time, holding service in the moment volume spikes so the scorecard never moves. That's the layer Intradiem runs, on top of the platforms the floors already use. Fifteen minutes and I'll walk how account-level experience connects to floor execution.

{{sender_full_name}}

Subject: closing the loop

Hi Justin, I'll leave it here. One parting thought: experience lost during a ramp is bought back at renewal prices, and national accounts renew with spreadsheets, not goodwill. The carriers that keep those scorecards flat are the ones whose floors hold in the moment. When that becomes the conversation in your seat, this is the seam I work. Glad to help whenever the timing fits.

{{sender_full_name}}

Objection quick-handles

"We already have WFM." Keep it. WFM plans the day; it does nothing in the gaps between scheduled activities, and it stops at the contact center while the claims floors run uncovered. This is the layer that acts in those gaps, on top of the WFM you just named, care centers and back office both.

"We're growing, not cutting; this isn't a cost year." Agreed, and that's the version of the problem this solves. Your own release holds expenses flat while the group book compounds, so the floors absorb the growth. Recovered idle capacity is how a growing operation absorbs volume without the expense ratio paying for it.

"We already run automation / RPA on claims." Good, that covers the transactions. The gap is the workforce layer: acting on the people-minutes between work in real time. RPA does the task; this recovers the humans' time around the tasks. They stack.

"No budget." The spend case is written in your own numbers: a flat expense envelope and a 25% growth line. This books against the envelope instead of asking to grow it, and if it can't pay for itself inside the year, fifteen minutes proves that too.

"Send me information." Will do. The one thing a deck can't answer is where your recoverable capacity actually sits, which floors and how much of it lands before enrollment season; that's a fifteen-minute conversation. I'll send the overview and we can find time if it's worth it. *Optional verified proof (1:1 replies only, labeled public):* Humana, on the record: first-year in-year return, 7X ROI five years in, 2 hours of capacity per agent per month (public SWPP/Intradiem webinar).

"Bad timing, enrollment season is coming." Enrollment season is the argument. Capacity work that starts now is in place for the heaviest weeks of the year; capacity found in November is a post-mortem. Scoping now is the cheap moment.

Claims basis and execution notes

Claims basis.

Every company figure is Aflac's own, from the Q1 2026 earnings release (Apr 29 2026) and Q1 2026 earnings call (Apr 30 2026): group life/absence/disability +25%, group products +12.4%, U.S. net earned premiums \$1.555B +3.5%, U.S. sales \$318M +2.9%, total acquisition and operating expenses \$1.289B down 1.5%, U.S. expense ratio 38.3% up 70 bps, U.S. pretax margin 20.4% down 40 bps, 10,000-11,000 expected agent recruits with productivity +8%. All attributed in-line as Aflac's own releases and calls. Open enrollment as the industry's heaviest service season is a structural fact, not an Aflac disclosure. No layoff or cost-cutting event is claimed (none exists); the pressure framing is strictly the flat expense envelope and expense-ratio movement in Aflac's own numbers. "One Day Pay" is excluded (2015 marketing, unverified as current); the fast-claims brand promise is referenced only as public positioning without naming a program. No Intradiem ROI, savings, idle-percentage, or outcome number appears anywhere, per the Cost-Mandate personalization law; Humana is the only customer proof permitted, replies only, as Humana's own public telling.

Execution notes (one-off, stays out of the Clay workbooks).

The committee, copy, and data live in this document; nothing lands in a Clay motion workbook. Emails: 8 of 8 found by the Clay work-email waterfall on the first pass, Jul 16 (kcyrr, jjohnson, kmcclellan, jbarnes2, ewilks, tbain, mfradkin, j.funk@aflac.com), fully enriched before this document was drafted per the Jul 16 enrichment law. ZeroBounce sweep RUN Jul 16 (scratch table, 0.1 credits/row): 8/8 valid, no catch-all or risk flags. Pre-send email gate is CLEARED; remaining gates are rep review and the Salesforce ownership check. Sends run through the rep's one-off surface, Draft until rep review; nothing fires without a human approving each message. Before launch, Dallas flags in Slack for the standard checks: Salesforce ownership and open-opportunity check on Aflac (AE lane: Mike Regan), plus mailbox warm-up status. A second ring (Bob Ruff and Kerry Flack on group VB, the group-side claims directors, absence/leave operations leadership once full names verify) is a fresh one-off pull on Nathan's go.

Credits this one-off: 3 committee searches free; 8-contact email waterfall via Clay MCP (plus one duplicate-profile match), estimated ~12-20 credits, meter-confirm

on the Usage page next Clay session; ZeroBounce actual 0.8 (8 rows x 0.1, Jul 16). Logged in Clay_Credit_Ledger.md.
