

COST-MANDATE MOTION /// NEW LOGO

BMO Strike Room

BMO's CFO has committed to roughly \$250 million in annualised savings, half in fiscal 2026 and half in fiscal 2027, and reaffirmed it twice. The fiscal 2027 half has never been publicly sourced, and the plan that has to contain it is written before the October 31 fiscal close.

FTES BMO SAYS
LEXI REPLACED

The \$250 million that is only half sourced

The forcing function

On February 25 2026, BMO took a \$202 million pre-tax severance charge and its Chief Financial Officer put a number against it on the earnings call. Rahul Nalgirkar: *"We expect to realize annualized savings of approximately \$250 million from the charge, with half realized in 2026 and the remainder in 2027."*

He reaffirmed it three months later. On the Q2 call, May 27 2026: *"We are on track to execute the previously announced efficiency program, which will generate approximately \$250 million in annualized savings, half of which is expected to be realized this year."*

That is a forward obligation with a named owner, a public scoreboard and a hard date. The FY2026 half is being delivered. **The FY2027 half has never been publicly sourced.** BMO's fiscal year ends October 31, which means the plan that has to contain it gets built in September and October.

The tension the whole sequence hangs on

BMO has already conceded the mechanism. At its Investor Day on March 26 2026, Darryl White said BMO is *"automating our own businesses...Freeing capacity allowing teams to focus on higher value work,"* and that BMO expects *"continued savings from AI and digital adoption."*

So the argument is not whether capacity release is the answer. BMO said it is. The open question is where the next increment comes from, given that Aron Levine told the same room that *"More than 80% of our cost takeout target is already under execution"* and that BMO expects headcount to *"remain essentially flat on employee head count over time."*

Eighty percent under execution means twenty percent is not. Flat headcount means the remainder cannot come from reductions. It has to come from the operation running better.

The proof point BMO handed us

Levine, same Investor Day, on the Lexi chatbot: it *"truly automates the work of what used to be 28 FTEs on a call centre,"* automating frontline knowledge management across *"over 600 policy directives."*

BMO has already proven internally that automating contact-centre work converts to FTE-equivalent capacity, and it has a number for it. That is the single most useful sentence any prospect published this year, because it removes the entire "does this actually work" conversation before it starts.

What BMO has disclosed about its own operations

- Canadian Personal & Business Banking serves clients through "*integrated branch, contact centre and digital channels.*" (Annual Information Form, fiscal year ended October 31 2025.)
- **Call Assist**, in BMO's own words: "*A real-time, multilingual agent-assist tool that improves first-call resolution and reduces misdirected calls, enabling more focused and empathetic client interactions through streamlined workflows and integrated analytics.*" Won Best Agent-Assist/Copilot Deployment for Contact Centre, announced May 26 2026.
- **SAFE** (Simplified Authorization for Entities), BMO's own words: "*A North American platform that enhances account signer management by using AI and machine learning to digitize, validate, and access records across the bank.*" Same announcement.
- More than 53,000 full-time equivalent employees as of October 31 2025.
- Enterprise employee AI adoption "over 96%" (Investor Day, March 26 2026).

Recent financial context (company-disclosed)

- Q1 FY2026 severance charge: \$202 million pre-tax, \$147 million after tax. Reported efficiency ratio 58.6%; excluding severance, adjusted 55.8%.
- Q2 FY2026: efficiency ratio 54.4%, positive operating leverage 4.1%. Net income \$2,630 million reported.
- Darryl White, Q1 release: "*Our focus on closely managing expenses and operational efficiency is creating capacity for strategic investments.*"
- White, Investor Day: "*We've delivered consistent operating leverage in nine out of the last 10 years.*" And on AI: "*By fiscal 2030, we have line of sight to over a \$1 billion of PPPT.*"
- Sale of Transportation Finance and Vendor Finance expected to close Q4 FY2026 with an anticipated \$1.1 billion pre-tax charge. This will dominate the Q4 narrative and is noise for our purposes.

Calendar anchor

BMO reports Q3 FY2026 on August 25 2026. The quarter ended July 31. Nalgirkar will be asked on that call whether the \$250 million program is on track, and it will be the third consecutive quarter he has had to answer for it.

Fiscal year ends October 31 2026. That is the deadline by which the first half of the \$250 million must be banked, and FY2027 planning firms up in the weeks before it.

The sequence is built to complete on Friday August 21 and go dark August 24 through 27. Sending into an earnings print is a placement problem and a judgement problem. Q3 is also the natural re-entry point with fresh language for anyone who did not respond.

Eight seats, two threads

Eight seats, all sourced live via Clay on July 29 2026. Seven emails swept through ZeroBounce the same day, before any copy was written.

#	NAME	TITLE	TIER	EMAIL	ZB STATUS	ANGLE
1	Paul Malik	Senior Vice President & Head, Customer Loyalty, Operational Excellence and Colleague Success	1 (champion)	paul.malik@bmo.com	Valid, no flags	His title is the three- way trade every other bank runs as three departments. Twenty months in seat (December 2024). Extended arc.
2	Gregory Brown	Chief Digital Officer (SVP), Canadian Personal & Business Banking	4 (exec sponsor)	gregory2.brown@bmo.com	Valid, no flags	Named spokesperson on the Call Assist award. Twelve months in seat (August 2025). Extended arc.
3	Andrew Hung	Chief Operating Officer, Canadian Commercial Banking and North American Integrated Solutions	1 (floor owner)	andrew.hung@bmo.com	Valid, no flags	"Integrated Solutions" is the shared- services scope. Back- office throughput sits with him. Twelve months in seat (August 2025).

4	Caroline Dufaux	Chief Financial Officer, BMO U.S.	2 (economic)	caroline.dufaux@bmo.com	Valid, no flags	Seven months in seat (January 2026), the same cohort as Nalgirkar. Carries the US share of the \$250 million.
5	Bill Gallagher	Head, Customer Experience, BMO U.S.	1 (champion)	gallagher@bmo.com	Valid, no flags	Owns the experience that has to hold while Levine's cost takeout executes. Surname-only address, swept and confirmed real.
6	Katherine Rivington	Chief Operating Officer, BMO Wealth Management	3 (operations)	katherine.rivington@bmo.com	Valid, no flags	A P&L asked to contribute to an enterprise number it did not set.
7	Matthew Bergeron-Wood	Director, Client Services, Canadian Business Banking	5 (operational)	matthew.bergeronwood@bmo.com	Valid, no flags	Six months in seat (January 2026). Closest to the daily reality. Carries the single humility clause.
8	Matt Turnbull	Head, Business Enablement (COO), Financial Crimes Unit	3 (back office)	Unresolved	Not swept	Clay waterfall did not return an address. LinkedIn-only, email queued on validation.

ZeroBounce sweep, July 29 2026: 8 of 8 addresses valid, zero catch-all and zero role-based sub-status flags. Run in workbook `OneOff_ZB_Sweep_Jul29`, table `BMO_Committee_ZB`, alongside the Bell table from earlier the same day. 0.8 credits. Page-verified at 100% of table completed, Status column read verbatim.

bmo.com returned clean on every address including the unusual surname-only `gallagher@bmo.com`, which is a real mailbox rather than a waterfall artefact. Two bench addresses were swept in the same run and are also valid.

Bench, not sequenced: Martha Moen, Head, Operational Excellence and Growth, Private Wealth, martha.moen@bmo.com, swept valid. Sean Ellery, Chief Digital Officer, Treasury & Payment Solutions. Emily Martisius, Director, Service Delivery Management and Technology Experience. Wade Bundy, VP, Senior Business Transformation Manager. Rebecca Ma, CFO US Personal and Business Banking. Steven Stamper, Senior Manager Call Center, twelve years in seat and the best operator seat in the set, but Clay returned no address at all.

Sourced and deliberately excluded:

- **David Colella**, Senior Manager, Workforce Management & External Labour Services, Procurement. This is contingent-labour procurement, not contact-centre workforce management. Same trap as Bell's reseller organisation, different shape. Approaching him on a workforce-orchestration pitch would signal we did not read the title.
- **Two contacts whose enriched email did not match their LinkedIn identity.** One returned a different surname entirely against the profile slug, one returned a name variant we could not reconcile. Both dropped rather than guessed. A wrong name at the top of a cold email is worse than no email.
- **Two contacts who are not at BMO at all** (one at Now Foods, one at Wintrust Mortgage). Clay index noise.
- **One contact whose waterfall returned a personal-domain address** rather than a BMO mailbox.

A note on entity resolution. `bmo.com` resolves in Clay to **BMO U.S.** (Chicago, roughly 11,600 employees), not to BMO Financial Group. The Canadian parent is a separate entity reached at `linkedin.com/company/bank-of-montreal` (Toronto, roughly 60,900 employees). `linkedin.com/company/bmo` resolves to an unrelated Austrian consultancy. Anyone rebuilding this account in Clay needs the Toronto entity, or they will get a US-only committee and miss the Canadian org entirely.

What reps can and cannot say

Say

- Anything BMO has published, with the date attached. The \$202 million charge, the \$250 million target and its FY2026/FY2027 split, both Nalgirkar quotes, the Investor Day language on automating its own businesses, Levine's 80% and the 28-FTE Lexi result, the efficiency ratios, the Call Assist and SAFE descriptions in BMO's own words, the contact-centre channel reference in the Annual Information Form.
- Intradiem's positioning: Dynamic Workforce Orchestration across contact centres **and** back offices, six verticals. This is the only Intradiem-level claim cleared in the Value Repository.
- The Humana result, on the record and named: partnership since 2020, first-year in-year return, 7X ROI five years in, 2.7 million automated contact-centre actions in 2025, roughly two hours of capacity per agent per month, AHT down 45 seconds, occupancy up 4%, 12,000 voluntary time-off hours generated. **Replies and objection handling only. Never in a cold touch.**

The Value Repository is FROZEN as a prospect-facing source as of July 21 2026

(Matt Graves, Director CSM, with Naveen). The entire cleared-to-ship allowlist is now three things: the Humana webinar claims, public CMS Star Ratings math with an estimate label, and the Dynamic Workforce Orchestration positioning statement.

Nothing else. All per-account CTO, Zuar/Greenlight savings, whitespace and maturity data is internal targeting only and does not promote to prospect copy until the value model is rebuilt from objective activity counts. This document uses only the first and third of those three, plus BMO's own disclosures. - Contact centre and back office together. BMO's account-signer processing, financial-crimes review queues and commercial servicing are as much of the story as the phone queue.

Do not say

- **No idle-time percentage. No efficiency statistic of Intradiem's own.** Blocked in the Value Repository and blocked by the motion. BMO's own disclosed efficiency ratio is a different thing and is usable, on the finance seat only.
- **No ROI, savings or payback figure for BMO.** No modelled dollar amount, no "typical customer sees," no arithmetic off the 28-FTE number to imply what BMO would get.
- **No Intradiem platform-scale, net-retention or ROI metric of any kind.** The Value Repository blocks every Intradiem performance metric except the Humana webinar claims. Figures that have circulated in prior strike rooms, including a platform headcount figure and a net-retention percentage, are **not** in the repository and do not ship. Flagged for correction upstream.

- **No BMO contact-centre headcount, agent count, site count or call volume.** BMO does not disclose them. The only disclosed anchor is enterprise FTE. Third-party estimates are not usable.
- **No claim that BMO is behind on contact-centre technology.** BMO runs **Amazon Connect** as its cloud contact centre, announced June 10 2021 with Steve Tennyson, Chief Technology and Operations Officer, quoted by name. Position as complementary to the platform they already run. Any message implying a gap here is factually wrong and reaches the exact executive who would know it.
- **No assumption about BMO's WFM vendor.** The Verint relationship is real but the newest dated public evidence is 2016 and the deployment references are older. Treat the intraday and workforce-management stack as an open discovery question, never as a known.
- **No FCAC penalty framing.** The \$4 million penalty announced February 2 2026 is real, but the violation was fee configuration and product disclosure across 2010 to 2024, not agents deviating from process on live interactions. It does not map to what we do, it collapses the moment a knowledgeable buyer examines it, and BMO has already refunded, remediated and donated the residual. Background only. Never in a message.
- **No complaint-handling attack.** The CCAO line about customer frustration with earlier stages of the complaint process is BMO's own published wording and is usable as context on one seat, framed as a throughput observation rather than an indictment. Never as a "you are failing customers" line.
- **No customer may be named in prospect copy, full stop, except Humana.** A naming gate was added to the Value Repository on July 21 2026: every customer name must be cleared against Jenna in Contracts (who holds the quotable / non-quotable master tracker) and Cheryl in Marketing (most website stories are anonymised) before it appears in front of a prospect. Default to category-level framing, for example "a top-five North American bank." **Humana is the sole confirmed named exception.** Assume named use of anyone else, including JPMorgan Chase, is prohibited until proven otherwise.
- **Name no Canadian peer at all.** Three of Canada's Big Five are active Intradiem customers: **Royal Bank of Canada, Canadian Imperial Bank of Commerce and TD Bank Group.** So is **Rogers Communications Canada.** For a BMO strike room this is the highest-consequence exclusion in the document, because a Canadian bank peer is exactly the comparison a rep would reach for under pressure and three of the four available names are customers. The continuation brief for this build flagged only RBC and Rogers; CIBC and TD were caught on a second screen of the July 10 2026 Salesforce export and are added here.
- **Sixteen of the 101 active customers are financial services,** including JPMorgan Chase, Wells Fargo, Citicorp Credit Services, PNC, US Bancorp and TIAA-CREF. None may be named. If a proof point is needed on a finance seat, the answer is Humana with the healthcare context intact, or nothing.
- **No Q3 commentary.** BMO has not reported Q3 FY2026. Any "as you said last quarter" reference must point to Q2, May 27 2026.

Cadence and committee choreography

Five-touch multi-channel core across about eight business days from each contact's entry day. Two contacts run the extended arc.

- **Touch 1 (Day 1)** Email. Why-now plus one hook specific to that seat.
- **Touch 2 (Day 2)** LinkedIn connection request carrying the opener.
- **Touch 3 (Day 4)** Voicemail plus a LinkedIn message the same day. **Every voicemail has a live-answer script behind it.** If they pick up, the rep does not read the voicemail out loud.
- **Touch 4 (Day 6)** Email. A genuinely new second angle.
- **Touch 5 (Day 9)** Breakup email.

Extended arc on Paul Malik and Gregory Brown: call #1 with a full script, call #2 shorter, a pattern interrupt, then a hail-mary before the breakup. Escalation runs soft to direct to persistent. The order does not invert to fit a calendar.

Staggered entry

DAY	DATE	CONTACTS ENTERING
Day 1	Wed Jul 29	Paul Malik (extended), Bill Gallagher, Matthew Bergeron-Wood
Day 2	Thu Jul 30	Andrew Hung, Matt Turnbull (LinkedIn only)
Day 3	Fri Jul 31	Katherine Rivington
Day 4	Mon Aug 3	Gregory Brown (extended), Caroline Dufaux

The champion and floor layer goes first so that by the time Gregory Brown enters on Day 4, the outreach has had time to surface internally through the people who would mention it. Malik is the most likely internal forwarder in the set and he is deliberately first.

The two-thread problem

BMO's June 2025 reorganisation split North American Personal & Business Banking into a co-head structure, effective July 7 2025. Mat Mehrotra took client-facing Canadian Personal & Business Banking. Sharon Haward-Laird took Canadian Commercial Banking **and North American Shared Services.**

That split matters operationally. The contact-centre agent-experience story and the back-office throughput story now have two different owners with two different P&Ls, and in a co-head structure neither can unilaterally sponsor an enterprise deal. Gregory

Brown sits under the first. Andrew Hung sits under the second. The messaging is threaded so that the two halves are visibly the same argument if they ever compare notes, which is the point.

Neither Mehrotra nor Haward-Laird is sequenced here. They are the escalation target once a thread is warm, not a cold entry.

Deliverability

Seven addresses into bmo.com inside four days is a pattern-flag risk regardless of copy quality. The sweep came back clean with no catch-all, so placement is the only variable left. Every contact has a different subject line, no two openers share a structure, sends stagger across the day rather than clustering, and Matt Turnbull leads on LinkedIn with his email queued behind validation.

Paul Malik

SVP & Head, Customer Loyalty, Operational Excellence and Colleague Success

ENTRY DAY 1

EXTENDED ARC

Hook. His title puts three things under one person that almost every bank runs as three departments trading against each other. There is exactly one lever that moves all three the same direction, and BMO already named it at Investor Day.

TOUCH 1 • DAY 1 • EMAIL

three things, one person

Paul, your title puts customer loyalty, operational excellence and colleague success under one person. Most banks run those as three departments that trade against each other, and the trade is usually made at the colleague's expense.

BMO's own Investor Day language was about automating its own businesses and freeing capacity so teams focus on higher value work. That is the one move that does not force the trade. It gives people their time back, holds the experience, and lowers cost at the same time.

Intradiem runs workforce orchestration across the contact centre and the back office, acting on real-time conditions rather than reporting on them afterward. Twenty minutes?

{{sender}}

TOUCH 2 • DAY 2 • LINKEDIN CONNECTION REQUEST

Paul, three things sit under you that most banks run as competing departments. Loyalty, operational excellence, colleague success. I spend my time on the one lever that moves all three the same direction instead of trading one against another, which is capacity recovered from inside the operation you already have. Would value connecting.

TOUCH 3 • DAY 4 • VOICEMAIL

Paul, this is {{sender}} with Intradiem. I sent you a note about your title, loyalty and operational excellence and colleague success reporting to one person, and how most operations treat those three as a trade. There is one lever that moves all three the same way. I am at [number], and the email is easy to reply to. Thanks Paul.

TOUCH 3 • DAY 4 • LIVE-ANSWER SCRIPT, IF HE PICKS UP

OPENER

Paul, {{sender}} with Intradiem. Give me thirty seconds and then tell me whether to keep going.

THE THIRTY SECONDS

Your title is the reason I called. Loyalty, operational excellence and colleague success under one person is unusual, and it means you are the one who feels it when those three trade against each other. The only lever I know that moves all three the same direction is capacity recovered from inside the operation, because it does not cost a reduction and it does not cost service. BMO already said at Investor Day that automating its own businesses frees capacity for higher value work. I work the layer that actually does that on the floor, in the moment, rather than in a report after the shift.

CLOSE

Worth twenty minutes to see where that usually lands at your scale? I can work around your calendar.

TOUCH 3 • DAY 4 • LINKEDIN MESSAGE

Paul, left you a voicemail too. Short version. Every operation I see makes loyalty, cost and colleague experience trade against each other, and treats that as physics. It is not. Capacity recovered from inside the operation moves all three the same direction. Twenty minutes on where that shows up for you?

TOUCH 4 • DAY 6 • EMAIL

the twenty percent

Paul, a second thought, on arithmetic rather than philosophy.

Aron Levine told Investor Day that more than 80% of the cost takeout target is already under execution, and that BMO expects head count to stay essentially flat. Both of those are good news. Read together they also say something specific about what is left. The remainder cannot come from reductions, because head count is flat, and it cannot come from the 80% already in flight.

It has to come from the operation running better. That is a narrower problem than it sounds, and it is the one we work.

Twenty minutes to walk what the last stretch usually looks like?

{{sender}}

TOUCH 5 • DAY 8 • CALL #1, FULL SCRIPT

OPENER

Paul, {{sender}} with Intradiem. I have sent a couple of notes and I would rather ask you directly than send a third.

THE FRAME

BMO has a \$250 million savings commitment with half of it landing in fiscal 2027, a head count expectation that is flat, and 80% of the cost takeout already under execution. Those three facts leave exactly one place for the rest to come from. The operation has to run better, and it has to do that without spending the colleague experience you are accountable for.

THE ASK

I am not asking you to evaluate anything. Twenty minutes, and if the answer is that BMO has this covered, you will have spent twenty minutes and I will stop.

IF HE PUSHES ON WHAT IT ACTUALLY IS

We sit on top of whatever contact centre and workforce management platforms you already run. We do not replace them. We take the real-time state of the floor and trigger the action, coaching, training, offline work, back-office queues, in the moment rather than in a report.

TOUCH 6 • DAY 10 • CALL #2, SHORT

Paul, {{sender}} with Intradiem again. One question and I will let you go. Between now and the fiscal close in October, is anyone at BMO working the capacity side of that equation rather than the deflection side? If the answer is yes I will stop calling. If it is not obvious, that is the twenty minutes I am asking for.

TOUCH 7 • DAY 12 • PATTERN INTERRUPT, LINKEDIN MESSAGE

Paul, changing tack. The thing I keep noticing about roles like yours is that colleague success is usually the line that quietly funds the other two, because it is the only one without a number attached in the quarterly deck. Capacity recovered from inside the operation is the rare thing that gives it a number. Still think twenty minutes is worth it.

nine out of ten

Paul, this is my last one.

Darryl White told Investor Day that BMO has delivered consistent operating leverage in nine out of the last 10 years. That is a genuinely rare streak, and streaks like it are not maintained by finding a big saving once. They are maintained by an operation that keeps getting slightly better at the same work, year after year, without anybody having to announce a program.

Your three responsibilities are the machinery that produces that. Loyalty, operational excellence and colleague success are what the streak actually runs on, and they are also the first things a cost cycle asks to borrow against.

If protecting that is worth twenty minutes, I am here. If not, I have made my case.

{{sender}}

leaving it here

Paul, I will stop.

One parting thought. Operations that carry loyalty, cost and colleague experience under one leader tend to get better at making the trade, which looks like progress and is actually just a more sophisticated version of the same compromise. The teams that get out of it are the ones that stop optimising the trade and go find the capacity that was already inside the operation.

When that becomes the live question at BMO, the real-time execution layer is where I would start.

{{sender}}

Gregory Brown

Chief Digital Officer (SVP), Canadian Personal
& Business Banking

Hook. He was BMO's named voice on the Call Assist award. Call Assist optimises what happens during the call. The savings that have not been sourced yet are in the time between contacts and in the back office. Credit the investment, then draw the line.

TOUCH 1 • DAY 4 • EMAIL

during the call, and between them

Gregory, congratulations on Call Assist. BMO's own description is a real-time agent-assist tool that improves first-call resolution and reduces misdirected calls, which is a harder thing to ship than it sounds.

It also draws a clean line. Call Assist works during the interaction. The capacity question that is left over sits between interactions, and in the back office behind them, where nobody is on a call at all and the time still has to go somewhere.

Intradiem works the layer around the interaction rather than inside it. Twenty minutes on how the two fit together?

{{sender}}

TOUCH 2 • DAY 5 • LINKEDIN CONNECTION REQUEST

Gregory, Call Assist is the sharpest contact-centre thing a Canadian bank shipped this year, and BMO's own wording about reducing misrouting is the part I would have led with. My work starts where yours stops, which is the time between contacts and the back office behind them. Would value connecting.

TOUCH 3 • DAY 7 • VOICEMAIL

Gregory, this is {{sender}} with Intradiem. I sent a note about Call Assist and the distinction between what happens during a call and what happens between them. The second one is where most of the remaining capacity actually lives. I am at [number], and the email is easy to reply to. Thanks Gregory.

TOUCH 3 • DAY 7 • LIVE-ANSWER SCRIPT, IF HE PICKS UP

OPENER

Gregory, {{sender}} with Intradiem. Thirty seconds and then you can tell me whether to keep going.

THE THIRTY SECONDS

You shipped Call Assist and it won for a reason. It makes the interaction better while the interaction is happening. Every operation that gets that right discovers the next problem is a different shape, because the time between contacts, and the back-office work behind them, is not an interaction quality problem at all. It is an orchestration problem. We sit on top of the platforms you already run, including Amazon Connect, and turn real-time floor state into action while the shift is still running.

CLOSE

Worth twenty minutes to see where that boundary usually falls? I will work around your calendar.

TOUCH 3 • DAY 7 • LINKEDIN MESSAGE

Gregory, left a voicemail as well. The short version is that Call Assist and what I do are adjacent rather than overlapping. Yours is the interaction. Mine is everything around it, including the back office. Twenty minutes on where the boundary sits for BMO?

TOUCH 4 • DAY 9 • EMAIL

SAFE, and the pattern behind it

Gregory, a second angle, from the other award.

SAFE is described by BMO as a North American platform that uses AI and machine learning to digitise, validate and access account signer records across the bank. Call Assist is the front. SAFE is the back. Two different teams, two different problem statements, and the same underlying observation, which is that a lot of skilled time is spent on work that does not require judgement.

What neither one does is decide, in real time, what the person freed up should do next. That is the orchestration layer, and it is usually the piece nobody owns because it does not belong to a single platform.

Twenty minutes to walk where it typically sits?

{{sender}}

TOUCH 5 • DAY 11 • CALL #1, FULL SCRIPT

OPENER

Gregory, {{sender}} with Intradiem. You have not replied, which is fair, so I will make the case in one minute and then let you decide.

THE FRAME

BMO has \$250 million committed with half of it in fiscal 2027, Aron Levine said 80% of the cost takeout is already in flight, and head count is expected to stay flat. You have shipped the two things that most banks are still arguing about, Call Assist on the front and SAFE on the back. The gap that is left is not another point solution. It is the layer that decides what the recovered time gets used for, in the moment, across both.

THE ASK

Twenty minutes. If BMO already owns that layer, you will have spent twenty minutes and I will stop.

IF HE PUSHES ON THE STACK

We sit on top of what you run rather than replacing it. Amazon Connect, whatever you use for workforce management, whatever quality tooling you have. The integration conversation is short and it is not the hard part.

TOUCH 6 • DAY 13 • CALL #2, SHORT

Gregory, {{sender}} with Intradiem. Thirty seconds. Who at BMO owns the moment after the automation works, when the time comes back and something has to decide what it gets used for? If that is clearly somebody's job, say so and I am done. If it is not, that is the conversation.

TOUCH 7 • DAY 15 • PATTERN INTERRUPT, LINKEDIN MESSAGE

Gregory, different angle. BMO said enterprise employee AI adoption is over 96%, which is a genuinely unusual number and mostly a culture achievement rather than a technology one. Adoption that high changes the constraint. It stops being whether people will use the tools and becomes whether the operation is arranged to capture what the tools give back. That second problem is the one I would want to talk about.

28 FTEs

Gregory, last one from me.

Aron Levine told Investor Day that Lexi truly automates the work of what used to be 28 FTEs on a call centre, across more than 600 policy directives. BMO published an FTE-equivalent number for internal automation, which is rare and which makes the case for the mechanism far better than any vendor could.

The reason I keep writing is that the number proves the mechanism and says nothing about the ceiling. Twenty-eight is what one chatbot on one knowledge problem was worth. Nobody has published what the rest of the floor is worth, and the fiscal 2027 half of that \$250 million has to come from somewhere.

If that is interesting, twenty minutes. If not, I will leave it.

{{sender}}

closing the loop

Gregory, I will stop here.

The thought I would leave you with is that Call Assist and SAFE both solved a version of the same problem, which is skilled people doing work that did not need them. Both worked. The part that tends to go unowned afterward is what the recovered time is actually spent on, because it does not belong to the front or the back, it belongs to the operation.

When that becomes the question at BMO, the real-time orchestration layer is where I would start looking.

{{sender}}

Andrew Hung

Chief Operating Officer, Canadian Commercial Banking and
North American Integrated Solutions

Hook. "North American Integrated Solutions" is the shared-services half of the co-head split. His scope is the processing work behind commercial banking, which is where back-office throughput is either found or not found.

TOUCH 1 • DAY 2 • EMAIL

the integrated solutions half

Andrew, when BMO split the co-head structure last July, one half went to client-facing distribution and the other went to commercial banking with North American shared services attached. You run operations for that second half, which means the throughput half of the savings commitment is largely yours.

Nalgirkar has now put approximately \$250 million on the record twice, with half of it landing in fiscal 2027. Distribution can contribute to that. Processing has to.

What Intradiem does is act on live queue and workload state to move work while the day is still running, rather than reviewing it once the day is done. Twenty minutes on where that applies to shared services?

{{sender}}

TOUCH 2 • DAY 3 • LINKEDIN CONNECTION REQUEST

Andrew, the phrase in your title I keep coming back to is North American Integrated Solutions, because shared services is where an enterprise savings number either gets found or gets pushed back to the business lines. That is the problem I work, on the throughput side rather than the headcount side. Would value connecting.

TOUCH 3 • DAY 5 • VOICEMAIL

Andrew, this is {{sender}} with Intradiem. I sent a note about the shared services half of your title and the fiscal 2027 portion of the \$250 million commitment, which has to come from throughput rather than reductions. Worth a short conversation. I am at [number], and the email is easy to reply to. Thanks Andrew.

TOUCH 3 • DAY 5 • LIVE-ANSWER SCRIPT, IF HE PICKS UP

OPENER

Andrew, {{sender}} with Intradiem. Thirty seconds, then tell me whether to keep going.

THE THIRTY SECONDS

Your CFO has committed to roughly \$250 million twice now, with half of it landing in fiscal 2027, and the plan does not involve growing the team. In a shared-services organisation that resolves to one sentence, which is that the same people have to move more work without the queue quality slipping. We orchestrate that. Live workload state triggers the action, so work gets routed and rebalanced while the day is still running rather than reviewed after it.

CLOSE

Twenty minutes to walk where that fits against what you already run? I will work around your calendar.

TOUCH 3 • DAY 5 • LINKEDIN MESSAGE

Andrew, left a voicemail too. The short version is that a flat head count expectation plus a fiscal 2027 savings tranche is a throughput problem, and in shared services throughput is a routing and timing problem before it is a tooling problem. Twenty minutes on how you are approaching it?

TOUCH 4 • DAY 7 • EMAIL

the word "integrated"

Andrew, one more thought and then I will leave it with you.

The interesting word in your title is integrated. Work that stays inside one line of business gets measured, owned and improved. Work that crosses two is where throughput quietly disappears, because no single person sees the whole path and every handoff looks reasonable from the side of it they can see.

Shared services is made almost entirely of that second kind. It is also why the savings in a shared-services organisation are usually found in sequencing rather than in effort, and why they are invisible until somebody instruments the path rather than the steps.

Twenty minutes on how you see the crossing points?

{{sender}}

last note from me

Andrew, I will leave it here.

The observation I would offer is that shared-services organisations usually absorb enterprise savings targets by getting more disciplined, and discipline has a ceiling that arrives about eighteen months in. What is underneath the ceiling is the work that gets done at the wrong time by the wrong queue, which no amount of discipline fixes because it is a timing problem rather than an effort problem.

If that becomes the live question before the fiscal close, I am easy to find.

{{sender}}

Caroline Dufaux

Chief Financial Officer, BMO U.S.

Hook. She took the CFO seat in January 2026, the same month Nalgirkar took the enterprise seat. Q1 was his first quarter and the \$250 million was announced in it. She carries the US share of a number she did not set, and the fiscal 2027 half of it is not publicly sourced.

TOUCH 1 • DAY 4 • EMAIL

October 31

Caroline, you took the US finance seat in the same quarter the \$250 million efficiency program was announced, which means you inherited the number and the timetable together.

The fiscal 2026 half is tracking. Nalgirkar confirmed that in May. The half that lands in fiscal 2027 has not been publicly sourced yet, and the plan that has to contain it gets built before October 31.

Intradiem recovers capacity from inside operations you already run, which is the rare line that does not trade against service levels or head count. Worth twenty minutes before the planning cycle closes?

{{sender}}

TOUCH 2 • DAY 5 • LINKEDIN CONNECTION REQUEST

Caroline, you stepped into the US finance seat the same quarter the efficiency program was announced. That is a specific kind of inheritance, because the fiscal 2027 half of it is still an open plan rather than a booked one. Capacity recovered from existing operations is the part of that plan I work on. Would value connecting.

TOUCH 3 • DAY 7 • VOICEMAIL

Caroline, this is {{sender}} with Intradiem. I sent a note about the fiscal 2027 half of the \$250 million, and the fact that the plan carrying it gets written before October 31. Capacity recovered from existing operations is the piece I would want to put in front of you. I am at [number]. Thanks Caroline.

TOUCH 3 • DAY 7 • LIVE-ANSWER SCRIPT, IF SHE PICKS UP

OPENER

Caroline, {{sender}} with Intradiem. Thirty seconds and you can tell me whether this is worth your time.

THE THIRTY SECONDS

Rahul has committed to roughly \$250 million annualised, half this year and half next, and reaffirmed it in May. Q2 came in at a 54.4% efficiency ratio with positive operating leverage, so the first half is working. The second half is the one with the least public detail attached, and fiscal 2027 planning happens between now and the October close. What we do is recover capacity from inside contact centre and back office operations, which does not cost a reduction and does not cost service, so it is one of the few sources that survives a planning review intact.

CLOSE

Twenty minutes before the cycle closes? I can send a one-pager first if that is easier.

TOUCH 3 • DAY 7 • LINKEDIN MESSAGE

Caroline, left you a voicemail as well. The short version is timing rather than product. The fiscal 2027 tranche is a planning decision made in September and October, not an execution decision made later. Twenty minutes while it is still a plan?

TOUCH 4 • DAY 9 • EMAIL

the third time he gets asked

Caroline, one more, then I will leave you alone.

Rahul put the \$250 million on the record in February and reaffirmed it in May. On August 25 he answers for it a third time, and the question that has not been put to him yet is not whether this year is tracking. It is where the fiscal 2027 half comes from.

The reason I am writing now rather than after that call is that the answer to that question gets decided in the planning work happening between now and the October close, not on the call itself. By the time it is asked in public, it has usually already been settled in private.

Twenty minutes while it is still being settled?

{{sender}}

leaving this with you

Caroline, I will stop.

The reason I pushed on the timing rather than the product is that this particular category is almost always evaluated a quarter after it would have been most useful. Capacity recovered from existing operations is slow to stand up and fast to compound, which makes it a planning-cycle decision rather than an in-year one.

If the fiscal 2027 tranche is still open in September, that is the moment. I am easy to find.

{{sender}}

Bill Gallagher

Head, Customer Experience, BMO U.S.

Hook. Levine's cost takeout runs through the US business Gallagher supports, and the stated plan holds head count flat. He owns the experience that has to survive that.

TOUCH 1 • DAY 1 • EMAIL

what holds while the cost comes down

Bill, the position Aron Levine described at Investor Day is a good one to be in and a difficult one to sit under. More than 80% of the cost takeout target already under execution, head count expected to stay essentially flat, and a target of low 50% efficiency in the medium term.

Somebody has to hold the experience steady while all of that lands. That is your seat.

There is a way to find capacity that protects the experience instead of spending it, and it works on timing rather than staffing. Twenty minutes on where the pressure usually shows up first?

{{sender}}

TOUCH 2 • DAY 2 • LINKEDIN CONNECTION REQUEST

Bill, cost takeout and customer experience are usually the two things a bank asks the same operation to deliver in opposite directions at the same time. You are on the receiving end of that at BMO US right now. I work the narrow slice where the two stop fighting. Would value connecting.

TOUCH 3 • DAY 4 • VOICEMAIL

Bill, this is {{sender}} with Intradiem. I sent you a note about holding the experience steady while the cost takeout executes, which is the harder half of that job and the half nobody writes an Investor Day slide about. I am at [number], and the email is easy to reply to. Thanks Bill.

TOUCH 3 • DAY 4 • LIVE-ANSWER SCRIPT, IF HE PICKS UP

OPENER

Bill, {{sender}} with Intradiem. Thirty seconds, then tell me whether to stop.

THE THIRTY SECONDS

BMO's US business has 80% of its cost takeout under execution with head count staying flat. That combination puts every bit of the strain on the experience, and the experience is your line. The reason I called is that most of what gets proposed at this stage trades service for cost. Real-time orchestration is the exception, because it works on when things happen rather than how many people do them. Coaching, training and offline work get delivered in the gaps that already exist instead of pulling people off the floor.

CLOSE

Twenty minutes on where that lands against what you already run?

TOUCH 3 • DAY 4 • LINKEDIN MESSAGE

Bill, left a voicemail too. The short version is that most cost programs make the experience someone else's problem, and that someone is usually the CX lead. There is a version of this that does not, and it is about timing rather than staffing. Twenty minutes?

TOUCH 4 • DAY 6 • EMAIL

the complaint about the complaint process

Bill, a second thought, from BMO's own reporting rather than mine.

The 2025 Customer Complaint Appeal Office report says the largest category of complaints it reviewed related to customer frustration with earlier stages of the complaint handling process. That is not a service-quality finding. It is a throughput finding, and it is BMO's own wording.

Cases that sit are cases that generate more contact. Nineteen percent of the reviewed cases took over 91 days. The work that fixes that is back-office orchestration rather than front-line effort, which is the part of your surface area that usually has the least tooling pointed at it.

Twenty minutes?

{{sender}}

leaving it here

Bill, I will stop.

One parting observation. In a cost program, customer experience is measured on outcomes it does not control, which is why the CX seat tends to spend the year defending numbers rather than changing them. The lever that changes them is usually not in the contact centre at all, it is in how fast the work behind the contact centre clears.

If that becomes the live question, the orchestration layer is where I would look first.

{{sender}}

Katherine Rivington

Chief Operating Officer, BMO Wealth Management

Hook. Wealth Management is a business asked to contribute to an enterprise savings number set elsewhere, with a client base that will not tolerate a visible service reduction.

TOUCH 1 • DAY 3 • EMAIL

contributing to a number you did not set

Katherine, the \$250 million efficiency commitment was set at the enterprise level and lands on every operating group, including one where a visible service reduction is not an option.

Wealth has a narrower set of moves than retail for exactly that reason. Deflection does not really work when the relationship is the product, which leaves throughput and timing as the levers that are actually available.

The lever Intradiem works is when the work happens, not how many people do it. Twenty minutes on how that applies inside a wealth operation?

{{sender}}

TOUCH 2 • DAY 4 • LINKEDIN CONNECTION REQUEST

Katherine, enterprise savings targets tend to land hardest on the businesses with the least room to reduce service, and wealth is usually top of that list because the relationship is the product. That constraint is the interesting part of the problem, not the obstacle. Would value connecting.

TOUCH 3 • DAY 6 • VOICEMAIL

Katherine, this is {{sender}} with Intradiem. I sent a note about wealth operations carrying a share of an enterprise savings number, and the fact that the usual levers do not really exist when the relationship is the product. There is a different one. I am at [number], and the email is easy to reply to. Thanks Katherine.

TOUCH 3 • DAY 6 • LIVE-ANSWER SCRIPT, IF SHE PICKS UP

OPENER

Katherine, {{sender}} with Intradiem. Thirty seconds and then you tell me.

THE THIRTY SECONDS

BMO has committed to roughly \$250 million annualised, half of it in fiscal 2027, and every operating group carries a share. Wealth is the one where deflection and self-serve do not really answer the question, because clients are paying for access. What is left is timing. Getting the servicing and back-office work done in the gaps that already exist in the day, rather than queuing it, is where the room actually is. That is what we orchestrate.

CLOSE

Twenty minutes to see whether it fits your operating model?

TOUCH 3 • DAY 6 • LINKEDIN MESSAGE

Katherine, left you a voicemail as well. Short version. Wealth cannot take capacity out of the client experience, so the only honest lever is when the work happens rather than how much of it there is. That is a narrower and more tractable problem than it sounds. Twenty minutes?

TOUCH 4 • DAY 8 • EMAIL

the back office nobody counts

Katherine, one more angle.

BMO's SAFE platform, in the bank's own description, digitises and validates account signer records across the bank using AI and machine learning. It exists because somebody worked out how much skilled time was going into document handling that did not require judgement.

Wealth has more of that work per client than any other group, and less of it is visible, because it sits inside relationship teams rather than a processing centre where somebody counts it. That invisibility is usually the reason it never gets a project.

Twenty minutes on how that surface typically gets sized?

{{sender}}

last note

Katherine, I will leave it here.

The thing I would offer is that operations like yours usually meet an enterprise savings target by asking relationship teams to absorb more, which works for about a year and then shows up in attrition and service inconsistency instead of in the cost line.

The alternative is to go looking for the work that is happening at the wrong time rather than the work that is happening at all. If that becomes worth an hour of somebody's attention at BMO, I am easy to find.

{{sender}}

Matthew Bergeron-Wood

Director, Client Services, Canadian
Business Banking

HUMILITY CLAUSE

Hook. Six months into the seat, close enough to the floor to know what actually happens and new enough to still be asking why it happens that way.

TOUCH 1 • DAY 1 • EMAIL

six months in

Matthew, you are about six months into running client services for Canadian Business Banking, which is roughly the point where the things that looked like quirks start looking like structure.

I work with service operations on a narrow problem, which is the gap between what the schedule says the day will be and what the day actually turns out to be. Coaching that gets skipped because the queue spiked, training that slips to next month, offline work that piles up on the wrong afternoon.

You know your own picture far better than I do from the outside. Twenty minutes on whether that is the shape of it for you?

{{sender}}

TOUCH 2 • DAY 2 • LINKEDIN CONNECTION REQUEST

Matthew, six months into a service leadership role is the most useful window there is, because you can still see what everyone else has stopped noticing. The specific thing I work on is the gap between the planned day and the actual day in service operations. Would value connecting.

TOUCH 3 • DAY 4 • VOICEMAIL

Matthew, this is {{sender}} with Intradiem. I sent a note about the gap between the day you plan and the day you get, and what falls through it, which is usually coaching and offline work. Worth a short conversation if that sounds familiar. I am at [number], and the email is easy to reply to. Thanks Matthew.

TOUCH 3 • DAY 4 • LIVE-ANSWER SCRIPT, IF HE PICKS UP

OPENER

Matthew, {{sender}} with Intradiem. Thirty seconds and you can tell me to stop.

THE THIRTY SECONDS

The pattern I see in every service operation is that the plan for the day is good and the day never matches it, so the first things to get cut are always coaching, training and the offline work, because they are the only things that are not a customer waiting. Twelve months later that shows up as consistency problems and nobody connects it back. What we do is act on the real conditions as they happen, so the coaching lands in the gap that actually existed rather than the gap that was scheduled.

CLOSE

Twenty minutes to compare that against how your week really goes?

TOUCH 3 • DAY 4 • LINKEDIN MESSAGE

Matthew, left a voicemail too. Short version. Coaching and offline work are the only things in a service operation that can be deferred without a customer noticing today, which is exactly why they always are. That compounds. Twenty minutes on how it looks at your end?

TOUCH 4 • DAY 6 • EMAIL

the thing that never gets escalated

Matthew, following up with one specific observation.

When a queue spikes, everything defers in the same order, every time. Coaching first, then training, then offline work, then process reviews. Nobody escalates it because no single instance matters, and there is no report that shows the cumulative version.

The reason it is worth naming is that BMO has a real cost commitment running through fiscal 2027 and a flat head count expectation, which means the answer has to come from the operation working better rather than being bigger. What defers under pressure is exactly the work that would have made it better.

Twenty minutes?

{{sender}}

leaving it here

Matthew, I will stop here.

The one thing I would say is that the deferral pattern is invisible precisely because it is universal, and the operations that get ahead of it are the ones where somebody new enough to still find it strange decided to measure it.

If it becomes worth twenty minutes at some point, I am easy to find.

{{sender}}

Matt Turnbull

Head, Business Enablement (COO),
Financial Crimes Unit

Hook. Financial crimes review queues are the purest back-office work in the bank. Volume-driven, rules-driven, and the one place where doing it faster by cutting quality is not an available option.

TOUCH 1 • DAY 2 • LINKEDIN CONNECTION REQUEST

Matt, financial crimes operations is the one back office where speed and quality genuinely cannot be traded, because the regulator cares about both and the volume is not yours to control. That constraint is the reason it interests me. I work on throughput in exactly that kind of queue. Would value connecting.

TOUCH 2 • DAY 5 • LINKEDIN MESSAGE

Matt, following up. The pattern in review operations is that the backlog is not really a capacity problem, it is a distribution problem. Work arrives in bursts, the queue is staffed to an average, and the difference between those two shows up as ageing cases. We orchestrate the response to that in real time rather than after the fact. Worth twenty minutes?

TOUCH 3 • DAY 9 • LINKEDIN MESSAGE

Matt, last one from me on this. A savings commitment running through fiscal 2027 lands on review operations as more cases through the same team, and quality is the one thing you cannot trade to absorb it. That leaves when the work gets done, which is unglamorous and is usually where the whole backlog actually lives. If queue ageing is a live conversation at your end, twenty minutes.

Email touches, queued. If Clay resolves an address, the sequence runs the standard five-touch core with the entry point rewritten around queue ageing and burst distribution rather than the enterprise savings number. Do not reuse Andrew Hung's copy. The two seats look adjacent on an org chart and the actual problems are different, and if they compare notes an obvious template does more damage than the second touch was worth.

Objection quick-handles

"We already have workforce management." Good, and we do not replace it. Verint, NICE, Calabrio and the rest are the layer we act on top of. They tell you what the day should look like. We handle what the day actually does, in the moment, and push the action to the floor. The two are complementary and the integration question is short.

"We are already deploying AI in customer service." BMO is, and the results are real. Call Assist and SAFE both work. The distinction worth drawing is between AI that improves an interaction or a document and AI that orchestrates the workforce around them. Those are different problems and most programs only fund the first, which is why the capacity keeps arriving without anywhere to go.

"We run Amazon Connect." Right, and that is a reason this is a shorter conversation rather than a longer one. We sit on top of the contact centre platform rather than replacing it. What we need from Connect is real-time state, and getting it is a well-trodden path.

"We just took a severance charge, we are done with efficiency for now." That is the reason for the call rather than the reason against it. The fiscal 2027 half of the \$250 million cannot come from another reduction if head count is staying flat, so it has to come from the operation running better. That work takes longer to stand up than a reduction does, which is why starting it late is what makes the fiscal 2027 number hard.

"Send me information." Reframe to a specific twenty minutes. If they hold, the Humana material is the right thing to send, and this is the only place it belongs: a five-year partnership, 7X return five years in, 2.7 million automated contact-centre actions in 2025, roughly two hours of capacity per agent per month, occupancy up four points, 12,000 voluntary time-off hours generated. Named, public, customer-told. Never in a cold touch.

"Budget is frozen." Understood. Worth twenty minutes anyway, because the shape of the case matters more than the timing. Capacity recovered from existing head count is the rare line a frozen-budget environment can still act on, and if it fits the plan it fits the next cycle rather than never. BMO's fiscal 2027 planning is happening now.

"Talk to procurement / we have a process." Happy to. Worth twenty minutes first so that what goes into the process is scoped to a real problem rather than a category. Otherwise it gets evaluated against workforce management suites, which is the wrong comparison and takes twice as long.

Claims basis

Every BMO figure in this document is company-disclosed with a date, verified against a BMO-hosted or regulator-published primary source. Sources, in the order they appear in the copy:

CLAIM	SOURCE	DATE
\$202M pre-tax / \$147M after-tax severance charge, "associated with advancing operational efficiencies across the enterprise"	BMO Q1 2026 MD&A and newsroom release	Feb 25, 2026
Nalgirkar: "approximately \$250 million from the charge, with half realized in 2026 and the remainder in 2027"	BMO-hosted Q1 2026 earnings call transcript	Feb 25, 2026
Nalgirkar: "on track to execute the previously announced efficiency program...half of which is expected to be realized this year"	BMO-hosted Q2 2026 earnings call transcript	May 27, 2026
Q1 efficiency ratio 58.6% reported / 55.8% adjusted ex-severance	BMO Q1 2026 MD&A and analyst presentation	Feb 25, 2026
Q2 efficiency ratio 54.4%, positive operating leverage 4.1%	BMO-hosted Q2 2026 earnings call transcript	May 27, 2026
White: "Our focus on closely managing expenses and operational efficiency is creating capacity for strategic investments"	BMO Q1 2026 newsroom release	Feb 25, 2026
White: "We're automating our own businesses...Freeing capacity allowing teams to focus on higher value work"	BMO 2026 Investor Day transcript	Mar 26, 2026
White: "consistent operating leverage in nine out of the last 10 years"; ">\$1 billion of PPPT" by fiscal 2030; employee AI adoption "over 96%"	BMO 2026 Investor Day transcript	Mar 26, 2026
Levine: Lexi "truly automates the work of what used to be 28 FTEs on a call centre", "over 600 policy directives"	BMO 2026 Investor Day transcript	Mar 26, 2026
Levine: "More than 80% of our cost takeout target is already under execution"; "low 50% efficiency"; head count "essentially flat"	BMO 2026 Investor Day transcript	Mar 26, 2026
Call Assist description, verbatim	BMO newsroom, Digital CX Awards release	May 26, 2026

SAFE description, verbatim	BMO newsroom, Digital CX Awards release	May 26, 2026
"integrated branch, contact centre and digital channels"; >53,000 FTE	BMO Annual Information Form, FY ended Oct 31 2025	Filed Dec 2025
CCAO: largest reviewed category "related to customer frustration with earlier stages of the complaint handling process"; 19% of reviewed cases over 91 days	BMO 2025 Customer Complaint Appeal Office Annual Report	2026
Co-head reorganisation splitting North American P&BB	BMO newsroom, executive appointments	Announced Jun 5, 2025, effective Jul 7, 2025
Q3 FY2026 earnings date, Aug 25 2026; fiscal year ends Oct 31	BMO Investor Relations events page; AIF FY2025	Current as of Jul 29, 2026
Amazon Connect as BMO's cloud contact centre, Tennyson quoted	BMO newsroom / AWS press release	Jun 10, 2021
Humana: 7X ROI five years in, ~2 hours capacity per agent per month, 2.7M automated actions, occupancy +4%, 12,000 VTO hours	Public SWPP/Intradiem webinar, via Value Repository, VERIFIED 1:many	Replies only

Not used, and why:

- **The FCAC \$4 million penalty (Feb 2, 2026).** Real and regulator-published, and it does not map to the product. The violation was fee configuration and disclosure across 2010 to 2024, not live-interaction process adherence. Using it would be ambulance-chasing against a bank that has already refunded, remediated and donated the residual, and it collapses under the first informed question. Excluded from every message.
- **Any BMO contact-centre headcount, agent count, site count, call volume or WFM vendor.** BMO does not disclose them. The Verint relationship is real but the newest dated evidence is 2016 and the deployment references are older still. Treated as a discovery question throughout.
- **Any Q3 FY2026 commentary.** BMO has not reported. The quarter ended July 31 and results are August 25. Any "as you said last quarter" reference points to Q2.
- **Any Intradiem platform-scale, net-retention or ROI metric.** The Value Repository blocks every Intradiem performance metric except the Humana webinar claims, and the July 21 2026 freeze narrows the entire allowlist to three items. **Two figures used in the Bell Canada strike room built earlier today, a platform headcount figure (~350,000 contact centre professionals) and a 2025 net-retention percentage (above 114%), do not appear in the Value Repository in any version and are not repository-approved.** Confirmed against both the working copy and the July 29

2026 export. They are excluded here and must be struck from the Bell document before it sends.

- **Any Greenlight/Zuar CTO or savings figure, and the \$529.6M company-wide savings number.** All internal targeting only. The raw CTO magnitude's unit is still unconfirmed (true dollars versus an internal cost index), so no unit-bearing phrasing ships from it at all.
- **Royal Bank of Canada, CIBC, TD Bank Group, Rogers Communications Canada, and every other active customer.** See the naming gate above. None appear anywhere in this document.
- **Any modelled ROI, savings or payback figure for BMO.** Nothing in the Value Repository supports an account-level number, and arithmetic off BMO's own 28-FTE result to imply a BMO outcome would be exactly that.
- **Any idle-time or efficiency percentage of Intradiem's own.** Blocked in the Value Repository and blocked by the motion. BMO's own disclosed efficiency ratio is a different thing and appears only on the finance seat.
- **OBSI 2025 sector complaint data.** Real and published, and it names no individual bank. Cannot be attributed to BMO.
- **Every active Intradiem customer, by name.** Per the July 10 2026 Salesforce export, 101 accounts are active, 16 of them financial services. The Canadian set matters most here: **Royal Bank of Canada, Canadian Imperial Bank of Commerce, TD Bank Group and Rogers Communications Canada.** None is named anywhere in this document. Under the July 21 2026 naming gate, no customer name reaches a prospect without Jenna (Contracts) and Cheryl (Marketing) clearance, and Humana is the only confirmed exception.

Open items:

1. **BMO reports Q3 FY2026 on August 25, 2026.** The sequence is built to complete August 21 and go dark August 24 to 27. If any part of it slips past August 25, the cost language must be re-run against what Nalgirkar actually says on that call before it sends.
2. **Matt Turnbull's email is unresolved.** He stays LinkedIn-only until Clay returns an address and it clears ZeroBounce.
3. **No named contact-centre or workforce-management leader was identified at BMO.** The org map stops at group-head level. This is the largest open discovery gap on the account and the most useful thing a first conversation could close.

Pre-send gates

1. Dallas copy read.
2. Salesforce ownership and open-opportunity check on BMO / Bank of Montreal, and the AE lane confirmed. Nathan's request did not name an owner for these three accounts.
3. Mailbox warm on the sending address. Seven addresses into bmo.com across four days.
4. Matt Turnbull's email resolved in Clay and swept, or he stays LinkedIn-only.
5. If any touch would land on or after August 25, hold it and re-run the cost language against the Q3 call.
6. Confirm the Bell Canada document's two unapproved Intradiem metrics are corrected before either account sends.

Nothing in this document sends without Dallas's approval. Every output stops at the human gate.
