Cost-Mandate Strike Room — Cardinal Health

Motion: Cost-Mandate / Efficiency (`cost_mandate_xvert`) · **Product angle:** Queue Optimizer for the patient- and customer-facing centers, Back Office Optimizer for shared services · **Target:** Cardinal Health · **Status:** copy approved, emails ZeroBounce-validated 7/7 (Jul 15), launch gated on rep review + warm mailbox

The forcing function: Cardinal's enterprise simplification mandate colliding with a service-volume ramp they also chose, all in their own numbers: ~\$200M in tariffs paid to date, \$200-300M expected FY26 impact, GMPD layoffs and a cost improvement plan, Hollar on record "relentlessly simplifying operations," while the ADS integration added ~500,000 patients and ~1,000 employees in a year and Continued Care is up ~20% since January. Volume compounding, cost mandate on, headcount scrutinized: the gap between those curves is workforce execution across the contact center and the back office, which is Dynamic Workforce Orchestration.

The one thesis every seat hears: the fastest recoverable line against the mandate is paid idle capacity already inside the service workforce, bookable this fiscal year, no headcount decision. Each seat hears it from their own floor. Cardinal is a confirmed non-customer (Jul 10 file; McKesson is a customer and is never referenced).

Merge fields: `{{sender}}` first name, Touches 1-3 and voicemail intros · `{{sender_full_name}}` Touches 4-5.

Account snapshot

ITEM	VALUE	SOURCE
Tariffs paid to date	~\$200M	Cardinal Q3 FY26 earnings call, Apr 30 2026
Expected FY26 tariff impact	\$200-300M	Company statements, May 2025
Potential tariff refund, if it materializes	~\$100M net after customer sharing, unrecognized	Aaron Alt (CFO), Q3 FY26 call
ADS integration, year one	~500,000 patients and ~1,000 employees added	Q3 FY26 call (one-year anniversary Apr 2026)
Continued Care Pathway	165,000 patients, up ~20% since January	Q3 FY26 call
Other segment (houses at-Home), Q2 FY26	Revenue \$1.7B +34%, profit \$179M +52%	Q2 FY26 release, Feb 5 2026
GMPD Q2 FY26 profit	\$37M, +106%, "cost optimization initiatives" cited	Q2 FY26 release, Feb 5 2026
Q3 FY26 revenue	\$60.9B, +11%, outlook raised again	Q3 FY26 release, Apr 30 2026
Cost posture on record	GMPD improvement plan, 2025 layoffs, "relentlessly simplifying operations" (CEO Jason Hollar)	Q3 FY26 call + May 2025 reporting
Customer status	Confirmed non-customer, eligible	Active-customer file, Jul 10

WHY NOW

Cardinal's fiscal year turned over July 1. FY27 is being planned and spent right now, the tariff refund is uncertain by their own CFO's language, and the cost program carries into the new year. Recovered idle capacity is the one line that books inside the same fiscal year the decision is made.

INTERNAL TARGETING NOTE (NEVER IN COPY)

UKG WFM footprint confirmed via LinkedIn titles, the precondition for the acts-in-the-gaps wedge (seeds the WFM-Adjacency overlay later). Shared services already partners with internal Transformation/Digital teams on AI (Calderone's profile), so the automation thesis is pre-funded. Velocare, their hospital-at-home startup, is hiring nationally: more home-based volume coming.

Buying committee

Pulled, enriched, and validated in Clay.

#	NAME	TITLE	LANE	TIER	EMAIL (ZEROBOUNCE: VALID, JUL 15)	ANGLE
1	Kristin Calderone	VP, Global Finance Shared Services (~2,000-person org: credit, collections, billing, AP)	cost_finance	A	kristin.calderone@cardinalhealth.com	BOO
2	Trisha Halliday	VP, Global Financial Shared Services (consolidation, business integrations)	cost_finance	B	trisha.halliday@cardinalhealth.com	BOO
3	Douglas Resnick	VP, Customer Operations (Twinsburg, the at-Home hub)	cost_ops	A	douglas.resnick@cardinalhealth.com	QO + BOO
4	Greg Stuart	VP, Customer Service (400+ associates, ~4M calls/yr, in seat since 2013)	cost_ops	B	gregory.stuart@cardinalhealth.com	QO
5	Erika Burkett	Sr Director, Customer Experience	cost_ops	B	erika.burkett@cardinalhealth.com	QO
6	Beth Teaman	Director of Customer Service, Edgepark Customer Connect and Care	cost_ops	B	beth.teaman@cardinalhealth.com	QO + BOO
7	Molly Freas	Director, Contact Center Technologies	cost_ops	B	molly.freas@cardinalhealth.com	QO

The two shared-services VPs: both real and current. Calderone's profile names the processing floors (~2,000 people: credit, collections, billing, AP), so she carries the Tier A idle-capacity thesis; Halliday's reads consolidation and business integrations, so her copy rides the integration angle. No overlap if they compare notes.

LINKEDIN

Halliday /in/trisha-halliday-70a7653/ · Resnick /in/douglas-resnick/ · Stuart /in/greg-stuart-777579a/ · Burkett /in/erika-burkett-717b1628/ · Teaman /in/beth-teaman/ · Freas /in/molly-freas-7805681/ · Calderone /in/kristin-calderone-30938569/

Messaging level: company-level narrative for every seat except Teaman, whose title names Edgepark Customer Connect and Care, the one seat cleared for unit-specific messaging. Resnick (Twinsburg, the at-Home hub) leans toward the volume ramp without org-chart claims. Nobody else gets an org-structure assumption.

Field rules, cadence, and choreography

What reps can and cannot say

SAY

Every number in the snapshot table, always attributed to Cardinal's own calls and releases ("by your April call"); what Intradiem is; and, in replies only, the Humana story as Humana told it publicly (first-year in-year return, 7X ROI five years in, 2 hours of capacity per agent per month, public SWPP webinar).

DO NOT SAY

Any Intradiem-computed savings, ROI, idle-percentage, or recovered-capacity number for Cardinal; any customer outcome except Humana's; any claim about Cardinal's org structure or internal tooling.

Brand-light window: Intradiem out of Touch 1-3 email and LinkedIn bodies (voicemail intro names it per template), named from Touch 4.

Cadence and committee choreography

Five touches per contact across ~9 business days:

T1 EMAIL 1	T2 +1d LINKEDIN CONNECT	T3 +3d VOICEMAIL + LINKEDIN MESSAGE	T4 +5d EMAIL 2, NEW ANGLE	T5 +8d BREAKUP
----------------------	--------------------------------------	---	--	--------------------------

Extended arc, must-win seats only (Calderone and Resnick): after Touch 4 the arc escalates before the breakup: **live call #1** (full script, +7d), **live call #2** (short, +9d), **pattern interrupt** (+10d, different format), then the breakup lands as the hail-mary (+12d). Escalation order is soft to direct to persistent, never inverted to hit a date.

Staggered entry: **Calderone and Halliday Day 1, Resnick and Stuart Day 2, Burkett, Teaman, and Freas Day 3.** The lanes never enter the same day, and the seven sequences carry seven different openers and hooks, so side-by-side forwards inside Cardinal read as one thesis from seven angles, not a blast. If an email is at deliverability risk, the LinkedIn touch carries the opener.

Kristin Calderone

VP, GLOBAL FINANCE SHARED SERVICES

COST_FINANCE

TIER A

ENTERS DAY 1

EXTENDED ARC (MUST-WIN)

TOUCH 1 · DAY 1 · EMAIL

SUBJECT **the line item inside 2,000 seats**

Kristin, Cardinal spent fiscal 26 absorbing costs it didn't choose, roughly \$200 million in tariffs paid by your April call, with simplification on the record every quarter. Running credit, collections, billing, and AP with a global team of about two thousand, you'll know program plans price the structural levers: systems, spans, location strategy. The line they almost never price is the paid idle capacity inside the processing day itself, the minutes between work items that never make the math because booking them needs no hire, no cut, and no migration.

The transformation work you're already driving covers the transactions. This is the people-minutes around them, recovered in real time and bookable this fiscal year. Worth 15 minutes on where it sits across billing and collections?

{{sender}}

TOUCH 2 · DAY 2 · LINKEDIN CONNECTION REQUEST

Kristin, I work the recoverable-capacity side of cost programs, the idle minutes inside large processing operations that a year like Cardinal's can book against without another headcount decision. Seemed worth connecting.

TOUCH 3 · DAY 4 · VOICEMAIL

Kristin, this is {{sender}} with Intradiem. I sent you a note on the piece of the cost year that never makes the program plan: the paid idle minutes inside the processing teams, recovered in real time and booked against the same target without a headcount decision. I'm at [number], or just reply to the email. Thanks Kristin.

TOUCH 3 · DAY 4 · LINKEDIN MESSAGE

Kristin, left you a voicemail too. Short version: the automation thesis you're already running covers the transactions, and the untouched half is the people-minutes around them. At two thousand seats, that line is material. Worth 15 minutes on where it sits?

TOUCH 4 · DAY 6 · EMAIL

SUBJECT **the workforce half of your automation thesis**

Hi Kristin, one framing that might be useful. The transformation programs shared services runs are built on a single thesis: find the work machines can carry. The half that usually goes unworked is the human side of the same ledger, the idle minutes between work items across a processing floor, which no bot touches because they belong to people, not transactions. Intradiem recovers those minutes in real time, on top of the systems and the RPA you already run, and the recovery books in the same fiscal year it starts, which matters with your fiscal 27 just open. Fifteen minutes and I'll walk where operations your scale usually find it.

{{sender_full_name}}

TOUCH 5 • DAY 8 • LIVE CALL #1, FULL SCRIPT

Opener (ask permission, then stop talking): Kristin, this is {{sender}} with Intradiem. I know I'm calling cold. Can I take thirty seconds, and you tell me if it's worth more?

The thirty seconds: You run credit, collections, billing, and AP with about two thousand people, in a year where Cardinal paid roughly two hundred million in tariffs and leadership's answer on record is simplification. Program plans price systems, spans, and location strategy. The line they never price is the paid idle minutes inside the processing day, the gaps between work items. Booking them takes no hire, no cut, no migration, and it lands this fiscal year. I'm asking for fifteen minutes to walk where that line usually sits at your scale.

If "our transformation program covers this": It covers the transactions. This is the people-minutes around them, the half a bot can't touch because it belongs to humans between work items. They stack.

If "no budget, we're cutting": That's why I called. The mandate created the target; this books against it without a headcount decision. If it can't pay for itself inside the program, fifteen minutes proves that too.

If "send me something": Will do, and the one thing a deck can't answer is where the minutes sit across billing and collections. That's the fifteen-minute part.

Close: Does Thursday work, or is early next week better?

TOUCH 6 • DAY 10 • LIVE CALL #2, SHORT SCRIPT

Kristin, {{sender}} at Intradiem again, I'll be quick. You've had two notes and a voicemail from me on one idea: the idle minutes inside a two-thousand-seat processing day are the cheapest line against the cost target, and they book this fiscal year. I'm asking for fifteen minutes to show where they sit. If it's a no, tell me no and I'll close the file. Fair enough?

TOUCH 7 • DAY 11 • PATTERN INTERRUPT: THREE-LINE EMAIL

SUBJECT **three numbers**

\$200M in tariffs paid. 2,000 seats. Zero new heads required to book the offset.

That's the whole argument. Fifteen minutes tests whether it holds at Cardinal.

{{sender_full_name}}

TOUCH 8 • DAY 13 • BREAKUP EMAIL

SUBJECT **leaving it here**

Hi Kristin, I'll stop here. One parting thought: every automation program eventually runs out of transactions to automate, and what's left on the table is the people-minutes around the work, paid for every day and never booked. That's the cheapest line in the building and the one I work. Glad to help whenever the timing's right.

{{sender_full_name}}

Trisha Halliday

VP, GLOBAL FINANCIAL SHARED SERVICES

COST_FINANCE

TIER B

ENTERS DAY 1

TOUCH 1 · DAY 1 · EMAILSUBJECT **the line the program plan misses**

Trisha, integration years are when shared services quietly carries the most: Cardinal's own calls describe back-office integration still in flight from the ADS deal while the enterprise absorbs roughly \$200 million in tariffs paid to date. Integration workloads run duplicate processes by design, and the program plan prices the structural fixes, systems, vendors, spans. The line it almost never prices is the paid idle capacity already inside the teams carrying that double load, the minutes between work that never make the math because nobody has to be hired or cut to book them.

That capacity can be recovered in real time and booked against the same target this fiscal year, on top of the systems you already run. Worth 15 minutes on where it sits inside global shared services?

{{sender}}

TOUCH 2 · DAY 2 · LINKEDIN CONNECTION REQUEST

Trisha, sent you a note on what integration years do to shared services, the double processes teams carry while the enterprise runs a cost program, and the capacity hiding inside that load. Worth connecting here too.

TOUCH 3 · DAY 4 · VOICEMAIL

Trisha, this is {{sender}} with Intradiem. I sent you a note on the integration load inside shared services, and the paid idle capacity sitting inside the teams carrying it. It books against the cost target this fiscal year, without a new headcount decision. I'm at [number], or just reply to the email. Thanks Trisha.

TOUCH 3 · DAY 4 · LINKEDIN MESSAGE

Trisha, left you a voicemail too. Short version: integration workloads and a cost target usually land on the same teams, and the one lever that serves both is recovering the idle minutes already inside their day. Worth 15 minutes on where that sits for you?

TOUCH 4 · DAY 6 · EMAILSUBJECT **bookable before the year gets away**

Hi Trisha, one thing about timing. Most levers under a program like Cardinal's are structural: they need a project, a vendor cycle, or a re-org before a dollar moves. Recovered idle capacity is the exception, because the minutes are already paid for and already inside the schedule; turning them into completed work starts showing up in the same fiscal year the decision is made, and your fiscal 27 just opened. That's the piece Intradiem works: real-time recovery across the back office and the contact center, on top of the stack you already run. Fifteen minutes and I'll walk the read on where it usually sits in a shared-services operation Cardinal's size.

{{sender_full_name}}

TOUCH 5 · DAY 9 · EMAILSUBJECT **leaving it here**

Hi Trisha, I'll stop here. One parting thought: every quarter a cost program runs, the teams that remain carry paid idle minutes that never make the program math, and they're the cheapest dollars in the building because nobody has to be hired or cut to book them. When that line becomes worth a look, that's the seam I work. Glad to help whenever the timing's right.

{{sender_full_name}}

Douglas Resnick

VP, CUSTOMER OPERATIONS

COST_OPS TIER A ENTERS DAY 2 EXTENDED ARC (MUST-WIN)

TOUCH 1 · DAY 2 · EMAIL

SUBJECT **two curves crossing on your floors**

Doug, by Cardinal's own numbers two curves are crossing in customer operations. Volume is compounding: roughly 500,000 patients and nearly a thousand people added through the ADS integration in a year, Continued Care up almost 20% since January. And the enterprise is simplifying, with a tariff bill near \$200 million paid and cost language in every quarter's script. The floors in between get told to hold record service levels, because you set that bar through the winter storms, without the headcount curve following the volume curve.

The only capacity that closes that gap without a req is the idle minutes already inside each day, the gaps the schedule plans around but nothing acts on. Worth 15 minutes on where those minutes sit across your operation?

{{sender}}

TOUCH 2 · DAY 3 · LINKEDIN CONNECTION REQUEST

Doug, I work the gap between scheduled capacity and what the floor actually needs hour to hour, which gets expensive when volume grows into a cost year the way Cardinal's has. Seemed worth connecting.

TOUCH 3 · DAY 5 · VOICEMAIL

Doug, this is {{sender}} with Intradiem. I emailed you about the two curves, service volume compounding while the enterprise simplifies, and the one capacity source that closes the gap without a req: the idle minutes already inside your teams' day, recovered in real time. I'm at [number], or reply to the email. Thanks Doug.

TOUCH 3 · DAY 5 · LINKEDIN MESSAGE

Doug, left a voicemail too. The heart of it: when volume grows into a cost mandate, the floor absorbs the difference, and the only headcount-free capacity is the minutes between work that nothing currently acts on. Worth 15 minutes on which of your queues carry the most?

TOUCH 4 · DAY 7 · EMAIL

SUBJECT **the baseline you set in the storms**

Hi Doug, the awkward part of holding record service levels through winter-storm weeks is that the number becomes the expectation, and fiscal 27 opens with volume still climbing and the cost program still on. The teams did that with the capacity they had, which means the slack they burned to do it is real and recoverable. Intradiem recovers it in real time, across the contact center and the back-office work behind it, on top of whatever the schedule already plans. Fifteen minutes and I'll walk where operations your size usually find it.

{{sender_full_name}}

TOUCH 5 • DAY 9 • LIVE CALL #1, FULL SCRIPT

Opener (ask permission, then stop talking): Doug, this is {{sender}} with Intradiem. Cold call, I'll own that. Thirty seconds and you decide if it's worth more?

The thirty seconds: By Cardinal's own numbers, two curves are crossing on your floors. The integrations added half a million patients and about a thousand people in a year, Continued Care is up twenty percent since January, and the enterprise is simplifying costs at the same time. Your teams held record service levels through the storms, so that's the bar now, with headcount that won't follow the volume. The only capacity that closes that gap without a req is the idle minutes already inside each day, recovered in real time. Fifteen minutes and I'll show where operations your size usually find them.

If "we have WFM": Keep it. WFM plans the day; nothing acts inside it, in the gaps between scheduled work, and it stops at the contact center while the back office runs uncovered. This is that layer, on top of what you run.

If "bad timing": Fiscal 27 just opened. The recoverable-capacity line either makes this year's plan now or gets found two quarters in. Scoping is the cheap moment.

If "send me something": Happy to, and the one thing a deck can't answer is which of your queues carry the most recoverable time. That's the fifteen minutes.

Close: What does Thursday look like, or early next week?

TOUCH 6 • DAY 11 • LIVE CALL #2, SHORT SCRIPT

Doug, {{sender}} at Intradiem, quick one. You've had two notes and a voicemail on the same idea: your volume curve and your headcount curve split, and the idle minutes inside each day are the only capacity that closes the gap without a req. Fifteen minutes shows where they sit. If it's a no, say no and I'm gone. Fair?

TOUCH 7 • DAY 12 • PATTERN INTERRUPT: LINKEDIN VOICE NOTE (WITH TEXT TL;DL)

Voice note (~25s): Doug, {{sender}} with Intradiem. One thought, twenty seconds. Half a million new patients, a thousand new people, record service levels through the storms. Nobody plans for the minutes between the work, and at your scale those minutes are a headcount-sized number nobody has to hire. Fifteen minutes whenever it's worth it.

Text TL;DL (same message): The minutes between work at your scale are a headcount-sized number nobody has to hire. Fifteen minutes whenever it's worth it.

TOUCH 8 • DAY 14 • BREAKUP EMAIL

SUBJECT **leaving it here**

Hi Doug, I'll stop for now. One thought worth keeping: the volume curve from the integrations doesn't flatten because the cost program says so, and the gap lands on your floors either as burnout or as recovered minutes. When choosing between those becomes a live question, that's the seam I work. Glad to help whenever the timing fits.

{{sender_full_name}}

Greg Stuart

VP, CUSTOMER SERVICE

COST_OPS TIER B ENTERS DAY 2

TOUCH 1 · DAY 2 · EMAIL

SUBJECT **the minutes the schedule plans around**

Greg, across four hundred-plus associates handling roughly four million calls a year, a few recovered minutes per person per day is a headcount-sized number, and after a decade-plus running that floor you've seen every version of a cost year. This one's different in one way: the tariff bill, about \$200 million paid by Cardinal's April call, means the scrutiny is enterprise-wide and the answer can't be another round of heads. WFM plans the day well, but nothing acts inside the day, in the gaps between scheduled work, and across a service operation those minutes are the only capacity that exists without a hire.

Recovering them in real time, for work, coaching, or catching the next spike, is a different lever than the ones this cycle usually reaches for. Worth 15 minutes on which of your queues carry the most?

{{sender}}

TOUCH 2 · DAY 3 · LINKEDIN CONNECTION REQUEST

Greg, I work the gap between what WFM schedules and what actually happens on the floor, the idle minutes that pile up when a cost year freezes headcount but not volume. Given how long you've run that floor at Cardinal, seemed worth connecting.

TOUCH 3 · DAY 5 · VOICEMAIL

Greg, this is {{sender}} with Intradiem. I emailed you about the minutes the schedule plans around, the idle capacity already inside your team's day that a cost year like this one can book without touching headcount. It works on top of the WFM you already run. I'm at [number], or reply to the email. Thanks Greg.

TOUCH 3 · DAY 5 · LINKEDIN MESSAGE

Greg, left a voicemail too. Short version: your WFM plans the day, nothing acts in the gaps between scheduled work, and in a cost year those minutes are the only capacity you'll get without a req. Worth 15 minutes on where they sit?

TOUCH 4 · DAY 7 · EMAIL

SUBJECT **what this cycle usually sacrifices**

Hi Greg, you'll have seen this before: a cost cycle lands on a service floor as more volume per person, and the first things sacrificed are training and coaching, which is how service erodes two quarters later. Recovering the idle minutes already inside the day flips that, the same capacity funds the coaching instead of disappearing into shrinkage. That's what Intradiem does in real time, on top of the WFM you already run, contact center and back office both. Fifteen minutes and I'll show which queues usually carry the most recoverable time.

{{sender_full_name}}

TOUCH 5 · DAY 10 · EMAIL

SUBJECT **leaving it here**

Hi Greg, I'll leave it here. One thought worth keeping: mandates end, but the idle minutes don't; they're on the payroll every day, and the floors that recover them ride out the next mandate instead of being reshaped by it. After a decade-plus in that seat you know the next one always comes. When it's worth a look, that's the seam I work.

{{sender_full_name}}

Erika Burkett

SR DIRECTOR, CUSTOMER EXPERIENCE

COST_OPS

TIER B

ENTERS DAY 3

TOUCH 1 • DAY 3 • EMAIL

SUBJECT **defending experience in a cost year**

Erika, the customer-experience seat is the hardest one to hold during a simplification push, because the erosion is invisible for two quarters. Cardinal's own numbers frame it: half a million patients added through the ADS integration, Continued Care up nearly 20% since January, and an enterprise absorbing a \$200 million tariff bill with cost language in every earnings script. When volume grows into a cost year, hold times stretch and follow-ups slip exactly where the experience is felt, and no scorecard catches it until it has already compounded.

The counter is capacity that already exists: the idle minutes inside each day, recovered in real time so the experience holds when the volume doesn't cooperate. Worth 15 minutes on where that sits for your teams?

{{sender}}

TOUCH 2 • DAY 4 • LINKEDIN CONNECTION REQUEST

Erika, sent you a note on the experience side of a cost year, the slow erosion that shows up two quarters after the volume outruns the staffing. Worth connecting here too.

TOUCH 3 • DAY 6 • VOICEMAIL

Erika, this is {{sender}} with Intradiem. I emailed you about defending experience through a cost year, and the capacity that does it without a req: the idle minutes already inside your teams' day, recovered in real time so service holds when volume spikes. I'm at [number], or reply to the email. Thanks Erika.

TOUCH 3 • DAY 6 • LINKEDIN MESSAGE

Erika, left a voicemail too. The gist: experience erodes quietly when volume outruns staffing, and the only headcount-free counter is recovering the minutes already inside the day. Worth 15 minutes on where it's tightest for you?

TOUCH 4 • DAY 8 • EMAIL

SUBJECT **the erosion shows up in Q3**

Hi Erika, the pattern that repeats in every cost cycle: the floor absorbs it quietly for a quarter or two, then the experience numbers move, and by then the fix is expensive. The cheaper version is upstream, recovering the idle minutes inside each day so coaching keeps happening and spikes get absorbed instead of felt. That's what Intradiem does in real time, on top of the stack your teams already run. Fifteen minutes and I'll walk how the experience measures connect to the minutes.

{{sender_full_name}}

TOUCH 5 • DAY 11 • EMAIL

SUBJECT **last note**

Hi Erika, I'll leave it here. One thought worth keeping: experience lost in a cost year is bought back at a premium later, and the teams that hold it are the ones that recover capacity instead of rationing it. When that becomes the conversation in your seat, that's where I spend my time. Glad to help whenever the timing fits.

{{sender_full_name}}

Beth Teaman

DIRECTOR OF CUSTOMER SERVICE, EDGE PARK CUSTOMER CONNECT AND CARE

COST_OPS

TIER B

ENTERS DAY 3

TOUCH 1 · DAY 3 · EMAIL

SUBJECT **where the 500,000 new patients actually land**

Beth, since you run Edgepark's Customer Connect and Care I'll be specific. By Cardinal's own April call, the ADS integration added roughly 500,000 patients in a year and Continued Care is at 165,000, up nearly 20% since January. Patients call, reorder, and chase documentation, so those numbers land on queues like yours, in an enterprise that is also very publicly simplifying costs. Do-more-with-less isn't a slogan at that intersection, it's the daily schedule.

The one capacity source that absorbs growth without a req is the idle minutes already inside your team's day, the gaps between calls and work items that nothing currently acts on, recovered in real time for the next spike, the backlog, or the coaching that usually gets skipped. Worth 15 minutes on which of your queues carry the most?

{{sender}}

TOUCH 2 · DAY 4 · LINKEDIN CONNECTION REQUEST

Beth, sent you a note on absorbing the patient growth landing on Connect and Care without the headcount following it. Worth connecting here as well.

TOUCH 3 · DAY 6 · VOICEMAIL

Beth, this is {{sender}} with Intradiem. I emailed you about the patient volume from the integrations landing on your queues, and the capacity that absorbs it without a req: the idle minutes already inside the day, recovered in real time for work, the backlog, or coaching. I'm at [number], or reply to the email. Thanks Beth.

TOUCH 3 · DAY 6 · LINKEDIN MESSAGE

Beth, left a voicemail too. Short version: the patient growth is compounding, the headcount isn't, and the minutes between calls and work items are the only capacity that closes that gap without a hire. Worth 15 minutes on where they sit in Connect and Care?

TOUCH 4 · DAY 8 · EMAIL

SUBJECT **reorder season doesn't check the budget**

Hi Beth, one pattern from direct-to-patient operations: the volume is seasonal and spiky, reorders, documentation chases, storm weeks, but the staffing plan is quarterly and flat, and in a cost year it stays flat. The difference gets paid either in hold times or in your team's evenings. Recovering the idle minutes inside each day is how the same roster absorbs the spikes, and it's what Intradiem does in real time, front office and the documentation work behind it. Fifteen minutes and I'll show which queues usually carry the most recoverable time.

{{sender_full_name}}

TOUCH 5 · DAY 11 · EMAIL

SUBJECT **leaving it here**

Hi Beth, I'll stop for now. One parting thought: the patient numbers Cardinal reported are still climbing, and next reorder season arrives whether or not a req does. The teams that ride that out are the ones that recover the capacity already on the payroll. When that's worth a look, that's the seam I work. Glad to help whenever the timing's right.

{{sender_full_name}}

Molly Freas

DIRECTOR, CONTACT CENTER TECHNOLOGIES

COST_OPS

TIER B

ENTERS DAY 3

TOUCH 1 • DAY 3 • EMAIL

SUBJECT **the layer the stack doesn't cover**

Molly, a contact-center stack plans the day, routes the work, and reports on what happened. What none of it does is act inside the day, in the minutes between scheduled work, when conditions shift faster than the plan. In a year where Cardinal is publicly simplifying costs while patient volume from the integrations keeps climbing, those unacted minutes are the difference between the floor absorbing the growth and the floor eating it.

There's a workforce layer that sits on top of the platforms you already run, no rip-and-replace, and acts on those minutes in real time. Worth 15 minutes to see how it plugs into what you've got?

{{sender}}

TOUCH 2 • DAY 4 • LINKEDIN CONNECTION REQUEST

Molly, sent you a note on the workforce layer that acts between the platforms, the real-time piece a contact-center stack plans around but doesn't cover. Seemed worth connecting.

TOUCH 3 • DAY 6 • VOICEMAIL

Molly, this is {{sender}} with Intradiem. I emailed you about the layer that acts inside the day, on the minutes between scheduled work, on top of the contact-center platforms you already run rather than instead of them. I'm at [number], or reply to the email. Thanks Molly.

TOUCH 3 • DAY 6 • LINKEDIN MESSAGE

Molly, left a voicemail too. Short version: everything in the stack plans or reports, nothing acts in the gaps in real time, and that's the layer I work on top of what you already own. Worth 15 minutes on the integration view?

TOUCH 4 • DAY 8 • EMAIL

SUBJECT **automation Cardinal already believes in**

Hi Molly, Cardinal's own earnings language leans on automation and productivity in the distribution centers, so the thesis is already bought internally: find the minutes machines can give back to the operation. Intradiem applies the same thesis to the service workforce, real-time orchestration of the minutes between work, riding on the WFM, ACD, and routing you already run. Technically it's an overlay, not a migration. Fifteen minutes and I'll walk the integration view with whatever's in your stack.

{{sender_full_name}}

TOUCH 5 • DAY 11 • EMAIL

SUBJECT **closing the loop**

Hi Molly, I'll stop here. One parting thought: the platforms in the stack get replaced every few years, but the unacted minutes between work survive every migration, because none of the platforms own them. Acting on those minutes is the cheapest capacity in the operation. When that layer becomes worth a look, that's where I spend my time.

{{sender_full_name}}

Objection quick-handles

From the Cost-Mandate standard.

"We already have WFM."

Right, and keep it. WFM plans the day; it does nothing in the gaps between scheduled activities, and it stops at the contact center while the back office runs uncovered. This is the layer that acts in those gaps, on top of the WFM you just described.

"No budget, we're cutting, not buying."

That's exactly the moment. The mandate created the target and the scrutiny; recovered idle capacity books against that target without a headcount decision, and the spend case is written in your own program's language. If it can't pay for itself inside the program, that's worth knowing in 15 minutes.

"We built automation in-house / have RPA."

Good, that usually covers the transactions. The gap is the workforce layer: acting on the people-minutes between work in real time. RPA does the task; this recovers the humans' idle time around the tasks. They stack.

"Send me information."

Will do. The one thing a deck can't answer is where your recoverable capacity actually sits, which floors and how much of it is bookable this fiscal year; that's a 15-minute conversation. I'll send the overview and we can find time if it's worth it.

Optional verified proof (1:1 replies only, labeled public): Humana, on the record: first-year in-year return, 7X ROI five years in, 2 hours of capacity per agent per month (public SWPP/Intradiem webinar).

"Bad timing, the program's already running."

Program scoping is the cheapest moment to look: the recoverable-capacity line either makes the plan now or gets found two quarters in. Fifteen minutes now beats a re-plan later, and your fiscal 27 just opened.

Claims basis

Every company figure is Cardinal's own, from the Q3 FY26 call (Apr 30 2026), Q2 FY26 release (Feb 5 2026), and their tariff and restructuring disclosures, attributed in-line. No Intradiem ROI, savings, or idle-percentage figure appears anywhere, per the Cost-Mandate personalization law. The two personal figures (Stuart's 400+ associates / ~4M calls; Calderone's ~2,000-person org) are those leaders' own LinkedIn self-descriptions, used only in their own 1:1 copy. Humana is the only customer proof permitted, replies only, as Humana's own public telling.

Execution notes (one-off account strategy, stays out of the Clay workbooks)

The committee, copy, and data live in this document; nothing lands in a Clay motion workbook. All seven emails ZeroBounce-validated **valid** on Jul 15 2026 (Clay scratch table `OneOff_CardinalHealth_ZB_Jul15`; domain MX also confirmed live). Sends run through the rep's one-off surface, Draft until rep review, nothing fires without a human approving each message. A second ring (at-Home ops directors, order-ops and revenue-cycle leads under Calderone, Velocare service leadership as it hires) is a fresh one-off pull on Nathan's go.
